# LOD Spec 2019

## For Building Information Models

April 2019

## Part I

*Nothing contained in this work shall be considered the rendering of legal advice. Readers are responsible for obtaining such advice from their own legal counsel. This work and any forms herein are intended solely for educational and informational purposes.*

*All images are intended to illustrate building conditions in compliance with common building codes. However, the images do not take into account site specific conditions, regional building codes and other important information that may require a material change for specific projects. These illustrations do not make representation for fitness for a particular project nor for code or design compliance.*

# ACKNOWLEDGEMENTS

Many thanks to all the individuals and organizations who reviewed and contributed to this work, and to the following industry association representatives and co-chairs of the major discipline subgroups who made this document possible:

## Chairs

<b>Overall</b>	Jim Bedrick, FAIA, AEC Process Engineering	Jan Reinhardt, Adept Project Delivery
<b>Domain Groups</b>	<b>Design</b>	<b>Construction</b>
<b>Structures</b>	Will Ikerd, PE, LEED AP IKERD Consulting, LLC	David Merrifield Steel Fab, Inc.
<b>Exterior Skin</b>	Michael F. Czap, AIA LBL Architects, Inc.	Jon McFarland Wheaton Sprague
<b>Interior Construction</b>	Ron Dellarria, AIA, CSI Collaborative Construction Consultants	Brian Filkins The Beck Group
<b>Conveying</b>	Brian Skripac, Assoc. AIA, LEED AP BD+C Cannon Design	Ken Flannigan, LEED AP KONE
<b>Building Services</b>	Mark Mergenschoer Bernhardt TME	David Francis Murray Company
<b>Civil</b>	Will Ikerd, PE, LEED AP IKERD Consulting, LLC	Gregg Madsen, RPLS Jake Fears, PE Wier & Associates, Inc.
<b>Bridge: Highway &amp; Rail</b>	Will Ikerd, PE, LEED AP IKERD Consulting, LLC	David Merrifield Steel Fab, Inc.
<b>Estimating with BIM</b>	Brent Pilgrim Beck Group	Benjamin Crosby YATES Construction
<b>Data with BIM</b>	Michael Perdue IKERD Consulting, LLC	Jan Reinhardt, Adept Project Delivery
<b>Legal</b>	Carl G. Roberts, Law Offices of Carl G. Roberts LLC	

## Industry Association Representatives

Dmitri Alferieff, Associated General Contractors  
Michael Bomba, Esq., American Institute of Architects

## Overall Editing and Graphics Creation

IKERD Consulting, LLC (IKERD.com) & BIMxD Solutions, LLC (BIMxD.com)

## Additional Contributors

In addition, we'd like to thank the many contributors from all sectors of the industry who helped make this specification possible, including:

Andy Jizba, US CAD

Benjamin Crosby, Yates Construction

Bill Klorman, Klorman Construction & ACI 131 BIM Committee Member (Concrete)

Brenda Ikerd, IKERD Consulting, IKERD.com (Structures, Civil)

Chuck Eastman, Ph.D, Georgia Institute of Technology

Jamie L. Davis, PE. LEED AP, Ryan Biggs | Clark Davis Engineering & Surveying (Masonry)

Jason P. Lien, PE, Precast Concrete Institute (PCI) BIM Committee, EnCon United (Precast)

Jessica Butcher, IKERD Consulting, IKERD.com (Graphics Editing, Structures, and Anchors)

Joe Cipra, Vulcraft/Verco Group (Structural Steel Open Web Joists and Metal Deck)

Joe Powell, EIT, Ikerd Consulting, IKERD.com (MEP)

John Russo, AIA, President, US Institute of Building Documentation (Laser Scanning & Level Of Accuracy)

Kirk Capristo, Astorino (Cover)

Lee Garduno, Southland Industries (MEP)

Luke Faulkner, LEED AP, AISC (Structural Steel)

Matthew J. Gomez PE, SE, Gerdau (Structural Steel)

Michael Bolduc, PE (MA), Simpson Gumpertz & Heger (Structural)

Michael Gustafason, PE, Autodesk (Structural)

Michael Mulder, Southland Industries (MEP)

Michael Perdue, Ikerd Consulting, IKERD.com (LOD Part II Data Tables)

Murat Karakas, Arup (MEP)

Natasha Wright, IKERD Consulting, IKERD.com (Graphics Editing, Structures, and Anchors)

Paul J. Hause, PE, Structural Consultants Inc. (Structural)

Peter J. Carrato, Ph.D., PE, SE, Bechtel & ACI 131 BIM Committee Chair (Concrete)

R. Wayne Muir, P.E., Structural Consultants Inc. & SEI-CASE BIM Committee Co-Chair (Structures)

Roger Becker, PE, SE, Precast Concrete Institute (PCI) Managing Director of Research and Development (Precast)

Scott Babin, ITW Building Components Group (Wood)

Soheil Seiqali, Klorman Construction (Concrete)

Steven Bumbalough, ITW Building Components Group (Wood)

# EXECUTIVE SUMMARY

For a detailed guide on the use of this Specification see [LOD Spec Guide](#) at the end of this document.

The *Level of Development (LOD) Specification* is a reference tool intended to improve the quality of communication among users of Building Information Models (BIMs) about the characteristics of elements in models. The *LOD Specification* expands upon the LOD schema developed by the American Institute of Architects (AIA) for its *E202-2009 BIM and Digital Data Exhibit* and updated for the AIA's *G202-2013 Project BIM Protocol Form*<sup>1</sup> by providing definitions and illustrations of BIM elements of different building systems at different stages of their development and use in the design and construction process.

Building Information Modeling presents information about a construction project or structure in the form of three-dimensional graphical representations of elements (e.g., doors, beams, etc.), which can be further associated with information about other characteristics of those elements. It is possible for the graphical representation of an element, taken alone, to suggest that greater accuracy or intention can be attributed to the element than is in fact the case. The AIA's LOD Schema was developed to provide a more systematic way of conveying the extent of reliance that may be placed on an element. Many participants in the design and construction process felt, however, that the industry would benefit from a more detailed treatment of the AIA's brief narrative definitions.

Discussions within the BIMForum led to the creation of a multi-disciplinary task force to develop and maintain the *LOD Specification*. The *LOD Specification* is an organized collection of interpretations of the AIA's LOD definitions describing input and information requirements and providing graphical examples of the different levels of development of a broad variety of building element classes.

Users of the *LOD Specification* are cautioned that it does not prescribe the necessary levels of development for different steps in the construction process. That determination is left to each project team. It is believed, however, that the availability of more precise definitions will reduce the risks of miscommunication among members of project teams when the expectations for different stages in the design and construction process are established, through easier identification of what each member of the team is expected to deliver and greater predictability of the level of effort that is required to create each member's deliverables.

The *LOD Specification* is organized by CSI Uniformat 2010<sup>2</sup>, with the subclasses expanded to Level 4 (and in a few cases to Level 5) to provide detail and clarity to the element definitions. The *LOD Specification* addresses only LOD 100 through LOD 400 of the AIA's LOD Schema, along with a new level – LOD 350 – which was added between LOD 300 and LOD 400 to better address the information levels required for effective trade coordination. The *LOD Specification* does not address LOD 500 since that LOD relates to field verification and is not an indication of progression to a higher level of geometry or information. See below for the Fundamental LOD Definitions.

The *LOD Specification* does not prescribe who the author of a particular component at a given LOD should be, as that will vary from one project to another. However, the document does provide a concise schematic means through the spreadsheet in Part II for a project team to identify model element authors, again in the interest of improving communication among model users. In addition, the *LOD Specification* task force has been working with software developers to provide a means within the software of tagging individual elements within a model with their current LOD level.

The *LOD Specification* is intended as a reference standard, but is also intended to evolve as the use of BIM develops. The Specification is updated annually, and previous versions are maintained at [www.bimforum.org/lod](http://www.bimforum.org/lod). Users are invited to provide comments and recommendations for consideration in future editions. These should be sent by email to [LOD@BIMForum.org](mailto:LOD@BIMForum.org).

---

<sup>1</sup> AIA Contract Document G202-2013, *Building Information Modeling Protocol Form* is part of a series of digital practice documents the AIA published in June 2013. This series consists of AIA E203™–2013, *Building Information Modeling and Digital Data Exhibit*, AIA G201™–2013, *Project Digital Data Protocol Form*, and AIA G202™–2013, *Project Building Information Modeling Protocol Form*. For general information on the documents and downloadable samples see [www.aia.org/digitaldocs](http://www.aia.org/digitaldocs). For executable versions of the documents see <http://www.aia.org/contractdocs>.

## CHANGES FROM 2018 VERSION

Note – Changes in the Element Geometry section are indicated with a change bar in the left margin. Items such as grammar corrections, added Uniformat descriptions, added Masterformat references, added or upgraded graphics, minor corrections/additions, etc. are marked with a bar but not detailed in this section.

### Specific Changes

#### Part I

Uniformat	Omniclass	
C20	21-03 20	Interior Finishes
D6010	21-04 60 10	Data Communications

#### Part II

	No changes
--	------------

## UPDATES OF THIS DOCUMENT

While this document is intended as a reference that can be cited in agreements such as contracts and BIM execution plans, it is recognized that the use of BIM in design and construction is evolving. To accommodate this evolution this document will be updated periodically in clearly identifiable versions. A project can adopt a specific version and then has the option to remain with that version or update if a new version is published. Initially the target update frequency is annually, but that may change in the future. In addition, interim updates may be issued if needed.

### Revision History

01/18/2019	Level of Development Specification 2019	
09/25/2018	Level of Development Specification 2019 DRAFT FOR PUBLIC COMMENT	
09/04/2018	Level of Development Specification 2018	
07/16/2018	Level of Development Specification 2018 DRAFT FOR PUBLIC COMMENT	
11/07/2017	Level of Development Specification 2017	
08/25/2017	Level of Development Specification 2017 DRAFT FOR PUBLIC COMMENT	
10/17/2016	Level of Development Specification 2016	
08/25/2016	Level of Development Specification 2016 DRAFT FOR PUBLIC COMMENT	Definitions have not been changed except for minor grammatical corrections and formatting. Engineered metal building structures, precast concrete, highway and rail road bridge content moved from Appendix to main body.
10/30/2015	Level of Development Specification 2015	Definitions have not been changed except for minor grammatical corrections and formatting. New content released as an Appendix to Part A for engineered metal building structures, precast concrete, highway bridge content and rail road bridge content.
4/30/2015	Level of Development Specification 2015 DRAFT FOR PUBLIC COMMENT	Definitions have not been changed except for minor grammatical corrections and formatting. Part B, Model Element Table, and Attribute Tables were added.
12/30/2014	Level of Development Specification 2014	Definitions have not been changed except for minor grammatical corrections and formatting. Images and image notes have been added in <i>blue italics font</i> .
8/22/2013	Level of Development Specification 2013	
4/24/2013	Initial draft for public review	

### Revision Process

#### Public Comment

Each new version is first released as a draft for public comment. Feedback is evaluated and resolved prior to the publishing of the official version.

#### Appendix

An increasing number of professional organizations are adopting this Specification and providing additional content relating to their domains. To accommodate information that becomes available after the public-comment release but prior to the final release, content is developed in collaboration with industry organizations and leading expert practitioners, and then vetted by the LOD working group. This

content is released as an Appendix to Part A and as additional identified Attribute Table tabs in Part B. The new content is then integrated into the next public comment draft.

## FUNDAMENTAL LOD DEFINITIONS<sup>3</sup>

### LOD 100

*The Model Element may be graphically represented in the Model with a symbol or other generic representation, but does not satisfy the requirements for LOD 200. Information related to the Model Element (i.e. cost per square foot, tonnage of HVAC, etc.) can be derived from other Model Elements.*

**BIMForum Interpretation:** LOD 100 elements are not geometric representations. Examples are information attached to other model elements or symbols showing the existence of a component but not its shape, size, or precise location. Any information derived from LOD 100 elements must be considered approximate.

### LOD 200

*The Model Element is graphically represented within the Model as a generic system, object, or assembly with approximate quantities, size, shape, location, and orientation. Non-graphic information may also be attached to the Model Element.*

**BIMForum interpretation:** At this LOD elements are generic placeholders. They may be recognizable as the components they represent, or they may be volumes for space reservation. Any information derived from LOD 200 elements must be considered approximate.

### LOD 300

*The Model Element is graphically represented within the Model as a specific system, object or assembly in terms of quantity, size, shape, location, and orientation. Non-graphic information may also be attached to the Model Element.*

**BIMForum interpretation:** The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs. The project origin is defined and the element is located accurately with respect to the project origin.

### LOD 350

*The Model Element is graphically represented within the Model as a specific system, object, or assembly in terms of quantity, size, shape, location, orientation, and interfaces with other building systems. Non-graphic information may also be attached to the Model Element.*

**BIMForum interpretation.** Parts necessary for coordination of the element with nearby or attached elements are modeled. These parts will include such items as supports and connections. The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

### LOD 400

*The Model Element is graphically represented within the Model as a specific system, object or assembly in terms of size, shape, location, quantity, and orientation with detailing, fabrication, assembly, and installation information. Non-graphic information may also be attached to the Model Element.*

**BIMForum interpretation.** An LOD 400 element is modeled at sufficient detail and accuracy for fabrication of the represented component. The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

---

<sup>3</sup> The definitions for LOD 100, 200, 300, 400, and 500 included in this Specification represent the updated language that appears in the AIA's most recent BIM protocol document, G202-2013, *Building Information Modeling Protocol Form*. The LOD 100, 200, 300, 400 and 500 definitions are produced by the AIA and have been used by permission. Copyright © 2013. The American Institute of Architects. All rights reserved. LOD 350 was developed by the LOD working group. Copyright © 2013. The Associated General Contractors of America and the American Institute of Architects. All rights reserved.

### LOD 500 [NOT USED]

*The Model Element is a field verified representation in terms of size, shape, location, quantity, and orientation. Non-graphic information may also be attached to the Model Elements.*

BIMForum interpretation. Since LOD 500 relates to field verification and is not an indication of progression to a higher level of model element geometry or non-graphic information, this Specification does not define or illustrate it.

### Example – Light Fixture:

- 1) 100 cost/sf attached to floor slabs
- 2) 200 light fixture, generic/approximate size/shape/location
- 3) 300 Design specified 2x4 troffer, specific size/shape/location
- 4) 350 Actual model, Lightolier DPA2G12LS232, specific size/shape/location
- 5) 400 As 350, plus special mounting details, as in a decorative soffit

### B            21-02 00 00            SHELL

Associated Masterformat Sections: 01 83 00

### B10            21-02 10            Superstructure

Associated Masterformat Sections: 01 83 13

100	Assumptions for structural framing are included in other modeled elements such as an architectural floor element that contains a layer for assumed structural framing depth or schematic structural elements that are not distinguishable by type or material.  Assembly depth/thickness or component size and locations still flexible.	
-----	--	--

### B1010            21-02 10 10            Floor Construction

Associated Masterformat Sections: 01 83 13

100	See <a href="#">B10</a>	
200	Model elements to include: <ul style="list-style-type: none"><li>• Floor with approximate dimensions</li><li>• Approximate supporting framing members</li><li>• Structural grids defined accurately</li></ul>	

### B1010.10            21-02 10 10 10            Floor Structural Frame

*Includes: Structural elements required for support of floor construction within basements and above grade. Includes columns, girders, beams, trusses, joists. Includes cast-in-place concrete, precast concrete, unit masonry, metal framed, and wood framed systems. Includes framed and sleeved openings for services. Includes Floor Construction Supplementary Components as appropriate.*

*Specific structural systems within this section are listed as follows:*

- Concrete [B1010.10.10](#)
- Precast Structural Inverted T Beam [B1010.10.11](#)
- Precast Structural Column [B1010.10.12](#)
- Masonry [B1010.10.20](#)
- Steel Framing Columns [B1010.10.30](#)
- Steel Framing Beams [B1010.10.40](#)
- Steel Framing Bracing Rods [B1010.10.50](#)
- Steel Joists [B1010.10.60](#)
- Cold-Formed Metal Framing [B1010.10.70](#)
- Wood Floor Trusses [B1010.10.80](#)

## Uniformat      Omniclass

### B2050            21-02 20 50            Exterior Doors and Grilles

Includes: Doors, grilles, and gates located in the exterior vertical enclosure. Includes screen and storm door assemblies. Includes Exterior Door Supplementary Components as appropriate. May Include: Wall Opening Supplementary Components as appropriate.

Associated Masterformat Sections: 01 83 16

100	Simple representation of a door unit. Size, count, and location are approximate.	
200	Units are modeled as a simple, monolithic component; or represented with simple frame and panel.  Nominal unit size is provided.	

### B2050.10        21-02 20 50 10        Exterior Entrance Doors

Includes: Exterior personnel door assemblies at main entrances. Includes automatic, revolving, balanced, and other special operating entrance doors, and sliding storefront wall systems.

Associated Masterformat Sections: 08 32 00 / 08 42 00 / 08 42 26 / 08 42 29 / 08 42 33  
08 42 36 / 08 43 29

100	See <a href="#">B20</a>	
200	See <a href="#">B2050</a>	
300	Entrance door assemblies modeled by type to include the following:  Specific door panels and frames (if applicable).  Operation is specified. Spatial requirements for operation may be modeled if required by BXP.	
350	Major framing elements are modeled at jambs and head.  Thresholds  Operation or mechanism enclosures are modeled.  All connections and interfaces modeled including brackets and supports.	
400	Complete mullion extrusion profiles Actual panel size dimensions.  .	

### B2050.20        21-02 20 50 20        Exterior Utility Doors

*Includes: Exterior personnel door assemblies other than at main entrances.*

Associated Masterformat Sections: 08 10 00

## Uniformat      Omniclass

100	See <a href="#">B20</a>	
200	See B2050	
300	See B2050.10	
350	See B2050.10	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

### B2050.30      21-02 20 50 30      Exterior Oversize Doors

*Includes: Large exterior door assemblies to allow for passage of large objects involving various operating methods. Includes Exterior Door Supplementary Components as appropriate including operators and drive mechanisms.*

Associated Masterformat Sections: 08 33 00 / 08 36 00 / 08 36 13 / 08 36 16 / 08 36 19  
08 36 23 / 08 34 16

100	See <a href="#">B20</a>	
200	See <a href="#">B2050</a>	
300	Oversize door assemblies modeled by type to include the following:  Door panels with nominal dimensions.  Frames with nominal dimensions.  Clearance zones are modeled or accommodated by model checking software for operation of overhead doors (other than coiling doors).  Enclosures and motor housings are modeled with overall nominal dimensions.	
350	Major framing elements in wall are modeled at jambs and head.  Attachment elements are modeled	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

### B2050.40      21-02 20 50 40      Exterior Special Function Doors

*Includes: Exterior door assemblies for a variety of special functions and applications involving a variety of operating methods. Includes Exterior Door Supplementary Components as appropriate including controls and operators.*

Associated Masterformat Sections: 08 30 00 / 08 34 13 / 08 34 19 / 08 34 46 / 08 34 49  
08 34 53 / 08 34 63 / 08 34 73 / 08 38 00 / 08 39 00 / 08 88 49 / 08 88 53 / 08 88 56

[See [B2050.20](#) or [B2050.30](#)]

### B2050.60      21-02 20 50 60      Exterior Grilles

*Includes: Exterior devices of open construction to provide moveable barrier to provide access through wall or other divider.*

Associated Masterformat Sections: 08 33 00 / 08 35 16

## Uniformat      Omniclass

100	See <a href="#">B20</a>	
200	See <a href="#">B2050</a>	
300	Grille assemblies modeled by type to include the following:  Nominal size of unit.  Operation is specified.	
350	Major framing elements are modeled at jambs and head.	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

### B2050.70      21-02 20 50 70      Exterior Gates

*Includes: Exterior devices of solid or open construction to provide moveable barrier to provide access through wall or other divider.*

Associated Masterformat Sections: 08 34 56

[See [B2050.60](#)]

### B2050.90      21-02 20 70      Exterior Door Supplementary Components

*Includes frames, hardware, glazing and louvers that are part of door to be included with exterior door elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 08 10 00 / 08 30 00 / 08 71 00 / 08 80 00 / 08 91 26

## B2070                          Exterior Louvers and Vents

*Includes: Exterior louvers which are not an integral part of mechanical equipment, including louvers connected to ducts.*

Associated Masterformat Sections: 08 90 00

100	See <a href="#">B20</a>	
200	Generic model element that is indicative of approximate area and location of intended louver/vent.	

### B2070.10      21-02 20 70 10      Exterior Louvers

Associated Masterformat Sections: 01 83 16 / 08 91 00

100	See <a href="#">B20</a>	
200	See <a href="#">B2070</a>	
300	Louver assembly modeled by type, indicative of area and location of intended louver/vent.  Accurate frame and blade boundary areas.  Opening for louver is cut from host wall	

## Uniformat      Omniclass

350	Major framing elements are modeled at connection points. Connection points are modeled.	
400	All connections and interfaces modeled including brackets, supports, and sealants.	

B2070.50      21-02 20 70 50      Exterior Vents

Associated Masterformat Sections: 08 95 00

[See [B2070.10](#)]

B2080      21-02 20 80      Exterior Wall Appurtenances

*Includes: Exterior enclosures, grilles and screens of wood, metal, plastic, and other materials for a variety of purposes including screening of equipment.*

Associated Masterformat Sections:

[See [B2050](#)]

B2080.10      21-02 20 80 10      Exterior Fixed Grilles and Screens

*Includes: Exterior enclosures, grilles and screens of wood, metal, plastic, and other materials for a variety of purposes including screening of equipment.*

Associated Masterformat Sections: 05 70 00 / 06 49 00 / 06 60 00 / 06 80 00 / 10 82 13

[See [B2050.60](#)]

B2080.30      21-02 20 80 30      Exterior Opening Protection Devices

*Includes: Manufactured items such as louvers, fins, shutters, demountable panels, awnings, and sun screens to provide sun control, privacy, security, insulation, and storm protection on exterior of windows, skylights, and entrances. Includes fixed and moveable, manually and electrically operated, and automatically controlled devices.*

Associated Masterformat Sections: 10 71 00 / 10 71 13 / 10 71 16 / 10 73 13

[See [B2010.60](#)]

B2080.50      21-02 20 80 50      Exterior Balcony Walls and Railings

*Includes: Exterior enclosures, grilles and screens of wood, metal, plastic, and other materials for a variety of purposes including screening of equipment.*

Associated Masterformat Sections: 03 30 00 / 03 40 00 / 04 20 00 / 05 41 00 / 06 11 00  
06 16 00 / 05 52 00 / 05 73 00 / 06 43 16 / 06 63 00 / 06 81 00

[See [B2010.50](#)]

B2080.70      21-02 20 80 70      Exterior Fabrications

*Includes: Exterior fabrications of a variety of materials formed to various profiles for a variety of purposes including column covers, decorative metal, ornamental woodwork, and plaster fabrications.*

## Uniformat      Omniclass

Associated Masterformat Sections: 03 49 00 / 05 50 00 / 05 58 13 / 05 70 00 / 06 44 00  
06 60 00 / 06 61 00 / 06 80 00 / 09 27 00

[See [Fundamental LOD Definitions](#)]

### B2080.80      21-02 20 80 80      Bird Control Devices

*Includes: Mechanical, electrical, physical, and chemical repellent systems, and protective devices.*

Associated Masterformat Sections: 10 81 13

[See [Fundamental LOD Definitions](#)]

### B2090      21-02 20 90      Exterior Wall Specialties

*Includes: Complete fabrication of metal, wood, and fiberglass, including accessories and appurtenances. For example, clocks, below-grade egress assemblies, and window wells.*

Associated Masterformat Sections: 07 77 00 / 10 74 00 / 10 74 13 / 10 74 43 / 10 74 46

[See [Fundamental LOD Definitions](#)]

### B30      21-02 30      Exterior Horizontal Enclosures

Associated Masterformat Sections: 01 83 16

100	Solid mass model representing overall building volume; or, schematic wall elements that are not distinguishable by type or material.  Assembly depth/thickness and locations still flexible.	
-----	--	--

### B3010      21-02 30 10      Roofing

Associated Masterformat Sections: 01 83 19

100	See <a href="#">B30</a>	
200	Generic element representing roof exterior skin	
300	Specific element representing roof insulation and exterior skin modeled to actual dimensions.  Surface slopes (e.g. tapered insulation) are modeled to actual dimensions.  Penetrations are modeled to nominal dimensions for major wall openings such as skylights, and large mechanical elements.	
350	All penetrations are modeled at actual rough-opening dimensions.  Flashing	

## Uniformat      Omniclass

### B3010.10      21-02 30 10 10      Steep Slope Roofing

*Includes: Lapped roofing shingles, shakes and roofing tiles, including fastening and flashing products and methods. Includes Roofing Supplementary Components as appropriate.*

Associated Masterformat Sections: 01 83 19 / 07 30 00 / 07 31 00 / 07 32 00 / 07 41 00  
07 61 00 / 07 63 00

[See [B3010](#)]

### B3010.50      21-02 30 10 50      Low-Slope Roofing

*Includes: Membrane roofing of various types and protected membrane roofing, including fastening and flashing products. Includes Roofing Supplementary Components as appropriate.*

Associated Masterformat Sections: 01 83 19 / 07 50 00 / 07 55 00 / 07 55 63 / 07 76 00

[See [B3010](#)]

### B3010.70      21-02 30 10 70      Canopy Roofing

*Includes: Roofing of various types over canopies. Includes Roofing Supplementary Components as appropriate.*

Associated Masterformat Sections:

[See [B1020](#)]

### B3010.70      21-02 30 10 70      Canopy Roofing

*Includes: Roofing of various types over canopies. Includes Roofing Supplementary Components as appropriate.*

Associated Masterformat Sections:

[See [B3010.10](#) or [B3010.50](#)]

### B3010.90      21-02 30 10 90      Roofing Supplementary Components

*Includes: substrate boards, vapor retarder, air barriers, deck insulation, flashing and sheet metal, and expansion joints to be included with roofing elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 07 22 00 / 07 26 00 / 07 27 00 / 07 62 00 / 07 65 00  
07 71 13 / 07 71 16 / 07 71 19 / 07 71 29 / 09 28 00

## B3020      21-02 30 20      Roof Appurtenances

*Includes: Roof specialties and accessories installed on or in roofing or traffic bearing horizontal enclosure systems. Includes components for the management of rainwater, but excludes mechanical and structural items.*

Associated Masterformat Sections:

100	See <a href="#">B30</a>	
200	See <a href="#">Fundamental LOD Definitions</a>	

## Uniformat      Omniclass

### B3020.10      21-02 30 20 10      Roof Accessories

*Includes: Ladders, curbs, vents, walkways, and snow guards.*

Associated Masterformat Sections: 05 51 33 / 07 72 00 / 07 72 13 / 07 72 23 / 07 72 26  
07 72 46 / 07 72 53

100	See <a href="#">B30</a>	
200	See <a href="#">Fundamental LOD Definitions</a>	
300	<p><u>Ladders</u>: Specific assemblies indicating length and width. Required access/clearance space is modeled or accommodated by model checking software.</p> <p><u>Walkways</u>: Specific assemblies indicating length, width, and rail/guard height.</p> <p><u>Vents</u>: Specific assemblies indicating roof opening size. Roof opening element is included. Required service access space is modeled or accommodated by model checking software.</p>	
350	<p><u>Ladders</u>: Specific assemblies indicating length, width, and attachment/anchoring members.</p> <p><u>Walkways</u>: Specific assemblies indicating length, width, rail/guard height, and support/attachment/anchoring members.</p> <p><u>Vents</u>: Specific assemblies indicating roof opening size and attachment/anchoring members if applicable.</p>	
400	See <a href="#">Fundamental LOD Definitions</a>	

### B3020.30      21-02 30 20 30      Roof Specialties

*Includes: Cupolas, spires, steeples, and weathervanes.*

Associated Masterformat Sections: 10 74 00 / 10 74 23 / 10 74 26 / 10 74 29 / 10 74 33

[\[See Fundamental LOD Definitions\]](#)

### B3020.70      21-02 30 20 70      Rainwater Management

*Includes: Components to manage rain water from roofing and traffic bearing horizontal enclosures. Includes: Conductor heads, gutters, downspouts, scuppers, and splash blocks.*

Associated Masterformat Sections: 07 71 23 / 07 71 33 / 03 48 16

[\[See \[D2030.10\]\(#\) and \[D2030.20\]\(#\)\]](#)

### B3040      21-02 30 40      Traffic Bearing Horizontal Enclosures

*Includes: Horizontal enclosures that are also traffic bearing. Includes Horizontal Enclosure Supplementary Components as appropriate.*

Associated Masterformat Sections: 01 83 16

100	See <a href="#">B30</a>	
200	See <a href="#">B3010</a>	

## Uniformat      Omniclass

### B3040.10      21-02 30 40 10      Traffic Bearing Coatings

*Includes: Surface applied waterproofing exposed to weather and suitable for pedestrian or vehicular traffic.*

Associated Masterformat Sections: 07 18 00

### B3040.30      21-02 30 40 30      Horizontal Waterproofing Membrane

*Includes: Substrate board, deck insulation, vapor retarder, sheet metal flashing and trim, flexible flashing, and expansion joints.*

Associated Masterformat Sections: 07 10 00

100	See <a href="#">B30</a>	
200	See <a href="#">B3040</a>	
300	Membrane assembly modeled by type to specified thickness.  Major openings such as shafts and hatches are modeled.	
350	Individual material layers of membrane assembly are modeled separately.  All openings and penetrations are modeled.  Expansion joints are modeled indicating specific width.	

### B3040.50      21-02 30 40 50      Wear Surfaces

*Includes: Wearing surfaces on top of horizontal waterproofing membrane that are suitable for pedestrian or vehicular traffic.*

Associated Masterformat Sections: 07 76 00 / 32 13 00 / 32 14 00

100	See <a href="#">B30</a>	
200	See <a href="#">B3040</a>	
300	Wear surface system modeled by type to specified thickness/depth.  Major openings such as shafts and hatches are modeled.	
350	Individual system elements are modeled separately.  Pedestals are modeled and located properly, if applicable.  Expansion joints are modeled indicating specific width.	

### B3040.90      21-02 30 40 90      Horizontal Enclosure Supplementary Components

*Includes: Substrate board, deck insulation, vapor retarder, sheet metal flashing and trim, flexible flashing, and expansion joints to be included with horizontal enclosure elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 07 20 00 / 07 26 00 / 07 62 00 / 07 65 00 / 07 71 13  
07 71 16 / 07 71 19 / 07 71 29 / 09 28 00

## Uniformat      Omniclass

### B3060            21-02 30 60            Horizontal Openings

*Includes: Openings in horizontal enclosures including roofing and traffic bearing horizontal enclosures. Includes Horizontal Opening Supplementary Components as appropriate.*

Associated Masterformat Sections:

100	See <a href="#">B30</a>
200	See <a href="#">B2020</a>

### B3060.10        21-02 30 60 10        Roof Windows and Skylights

*Includes: Operable and non-operable roof windows. Includes: Skylights without framing with plastic and glass glazing. Includes: Skylights with framing.*

Associated Masterformat Sections: 01 83 16 / 08 60 00 / 08 61 00 / 08 62 00 / 08 63 00  
08 64 00 / 08 67 00

[See [B2020.10](#)]

### B3060.50        21-02 30 60 50        Vents and Hatches

*Includes: Other roof openings such as roof hatches, smoke vents, and gravity roof ventilators.*

Associated Masterformat Sections: 07 72 33 / 07 72 36

[See [B3020.10](#)]

### B3060.90        21-02 30 60 90        Horizontal Opening Supplementary Components

*Includes: Frames, hardware, glazing, flashing, and joint sealants to be included with horizontal opening elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 08 75 00 / 08 80 00 / 07 60 00 / 07 92 00

### B3080            21-02 30 80            Overhead Exterior Enclosures

*Includes: Exposed to weather construction under horizontal enclosure construction. Includes suspension and support systems, insulation, vapor retarders, and air barriers.*

Associated Masterformat Sections: 01 83 16

100	See <a href="#">B30</a>
200	Generic assemblies indicative of overall scope and approximate thickness/system depth of overhead enclosure.

### B3080.10        21-02 30 80 10        Exterior Ceilings

Associated Masterformat Sections: 07 42 00 / 07 44 00 / 09 20 00 / 09 54 00 / 09 56 00  
09 90 00

100	See <a href="#">B30</a>
200	See <a href="#">B3080</a>

## Uniformat      Omniclass

300	Overall assembly modeled to specific system thickness including structural backing.  Location of expansion or control joints indicated, but not modeled.	
350	Face material modeled to specific thickness.  Structural backing members including bracing/lateral framing/kickers are modeled.  Expansion or control joints are modeled to indicate specific width.	
400	Individual elements of face material are modeled.  Structural backing members and all support members (kickers) are modeled including all connections.  Expansion or control joints are modeled.	

B3080.20      21-02 30 80 20      **Exterior Soffits**

Associated Masterformat Sections: 07 42 93 / 07 44 00 / 08 95 13 / 09 20 00 / 09 54 00  
09 56 00 / 09 90 00

[See [B3080.10](#)]

B3080.30      21-02 30 80 30      **Exterior Bulkheads**

Associated Masterformat Sections: 07 42 00 / 07 44 00 / 09 20 00 / 09 54 00 / 09 56 00  
09 90 00

[See [B3080.10](#)]

## Uniformat      Omniclass

### C            21-03            INTERIORS

Associated Masterformat Sections: 01 84 00

#### C10            21-03 10            Interior Construction

Associated Masterformat Sections: 01 84 13

100	A schematic model element or symbol that is not distinguishable by type or material.  Types, layouts, and locations are still flexible.	
-----	---	--

#### C1010            21-03 10 10            Interior Partitions

*Includes: Enclosures and partitions which are fixed and secured in place. Includes walls of concrete; and masonry; and wood and metal stud partitions with associated wall surfaces. Includes partitions of an open nature, such as wire mesh partitions. Partitions may be load bearing or non-load bearing. Includes Interior Partition Supplementary Components as appropriate.*

Associated Masterformat Sections: 10 22 00 / 01 84 13

100	See <a href="#">C10</a>	
200	Generic wall objects separated by type of material (e.g. gypsum board vs. masonry).  Approximate overall wall thickness represented by a single assembly.  Layouts, locations, heights, and elevation profiles are still flexible.	

#### C1010.10            21-03 10 10 10            Interior Fixed Partitions

*Includes: Enclosures and partitions which are fixed and secured in place. Includes walls of concrete; and masonry; and wood and metal stud partitions with associated wall surfaces. Includes partitions of an open nature, such as wire mesh partitions. Partitions may be load bearing or non-load bearing. Includes Interior Partition Supplementary Components as appropriate.*

Associated Masterformat Sections: 03 30 00 / 03 40 00 / 04 20 00 / 05 41 00 / 06 11 00 / 09 20 00 / 10 22 13

100	See <a href="#">C10</a>	
200	See <a href="#">C1010</a>	
300	Composite model assembly by type with overall thickness that accounts for framing and finish specified for the wall system. (Refer to LOD350 and LOD400 for individually modeled elements)  Wall elements are modeled to specific layouts, locations, heights, and elevation profiles. Penetrations are modeled to nominal dimensions for major wall openings such as windows, doors, and large mechanical elements.	
350	Structure and finish layers of partition assembly modeled as separate elements.	

## Uniformat      Omniclass

	All penetrations are modeled at actual rough-opening dimensions.  Major framing elements such as king studs, kickers, diagonal bracing, and headers are modeled.	
400	Element modeling to include: <ul style="list-style-type: none"><li>• Studs and tracks</li><li>• Bracing</li><li>• Insulation</li><li>• Sheathing or wall boards</li><li>• Openings/penetrations</li></ul>	

### C1010.10.10    21-03 10 10 10 10    Interior Wall (Masonry)

*Includes: Enclosures and partitions which are fixed and secured in place. Includes walls of concrete; and masonry; and wood and metal stud partitions with associated wall surfaces. Includes partitions of an open nature, such as wire mesh partitions. Partitions may be load bearing or non-load bearing. Includes Interior Partition Supplementary Components as appropriate.*

Associated Masterformat Sections: 10 22 00 / 01 84 13

100	See <a href="#">C10</a>	
200	See <a href="#">C1010</a>	 <i>86 C1010.04-LOD-200 Interior Wall (Masonry)</i>

## Uniformat      Omniclass

## Uniformat      Omniclass

### C1010.20      21-03 10 10 20      Interior Glazed Partitions

*Includes: Partitions primarily composed of glazed elements that may be fabricated or field constructed. Includes Interior Partition Supplementary Components as appropriate.*

Associated Masterformat Sections: 08 43 00

100	See <a href="#">C10</a>	
200	See <a href="#">C1010</a>	
300	Specified location and orientation of face of glass. Nominal face dimensions and thickness of glazing. Structural support systems of wall to be modeled. Spacing, location, size and orientation of mullions. Operable components defined (doors) and included in model.	
350	<ul style="list-style-type: none"><li>• Mullion shapes and geometry defined.</li><li>• Actual anchorage layouts and types defined.</li><li>• Actual panel dimensions (including seating).</li></ul>	
400	<ul style="list-style-type: none"><li>• Complete mullion extrusion profiles.</li><li>• Interface details between wall systems (within) and wall and support systems.</li></ul>	

### C1010.40      21-03 10 10 40      Interior Demountable Partitions

Associated Masterformat Sections: 10 22 19 / 01 84 13 / 10 22 19.13 / 10 22 19.23 / 10 22 19.33  
10 22 19.43 / 10 22 19.53

100	See <a href="#">C10</a>	
200	See <a href="#">C1010</a>	
300	See <a href="#">C1010.10</a>	
350	See <a href="#">C1010.10</a> – also include hardware, accessories, and support structure.	
400	See <a href="#">C1010.10</a>	

### C1010.50      21-03 10 10 50      Interior Operable Partitions

*Includes: Track-supported, operable panels and partitions, top hung and floor supported, and manually and power operated. Includes auditorium partitions and dividers. Includes overhead supports.*

Associated Masterformat Sections: 01 84 13 / 01 84 13 / 10 22 33 / 10 22 36 / 10 22 39  
10 22 43

100	See <a href="#">C10</a>	
200	See <a href="#">C1010</a>	

## Uniformat Omniclass

300	Operable partition system modeled to include spatial requirements for open/storage position and closed position. Spatial requirements for structure (overhead or below) to be modeled.	
350	Major support elements (overhead or below) Mechanical connections	
400	All assembly components including tracks, panels, hardware and supports.	

### C1010.70 21-03 10 10 70 Interior Screens

*Portable and open dividers.*

Associated Masterformat Sections: 10 22 23 / 10 82 23

[See [C1010.10](#)]

### C1010.90 21-03 10 10 90 Interior Partitions Supplementary Components

*Sound isolation components, firestopping, and expansion control to be included with interior partition elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 13 48 00 / 09 81 00 / 07 84 00 / 07 95 00

### C1020 21-03 10 20 Interior Windows

*Includes: Interior fixed or operable windows used singly and in multiples. Includes Interior Window Supplementary Components as appropriate. Includes metal, wood, plastic, and composite window units.*

Associated Masterformat Sections: 08 50 00 / 01 84 13

100	See <a href="#">C10</a>	
200	Windows approximate in terms of location, size, count and type. Units are modeled as a simple, monolithic component; or represented with simplified frame and glazing.  Nominal unit size is provided.	

### C1020.10 21-03 10 20 10 Interior Operating Windows

*Includes: Interior fixed or operable windows used singly and in multiples. Includes Interior Window Supplementary Components as appropriate. Includes metal, wood, plastic, and composite window units.*

Associated Masterformat Sections: 08 50 00

100	See <a href="#">C10</a>	
200	See <a href="#">C1020</a>	

## Uniformat Omniclass

300	<p>Units are modeled based on specified location and nominal size. Outer geometry of window frame elements and glazing modeled.</p> <p>Operation is indicated.</p> <p>Non-graphic information associated with model element:</p> <ul style="list-style-type: none"> <li>Aesthetic characteristics (finishes, glass types)</li> <li>Performance characteristics (i.e. U-value, wind loading, blast resistance, structural, air, thermal, water, sound)</li> <li>Functionality of the window (fixed, casement, double/single hung, awning/project out, pivot, sliding)</li> </ul>	
350	Attachment method of window to structure Embed geometry	
400	Frame profiles Glazing sub-components (gaskets) Attachment components	

### C1020.20 21-03 10 20 20 Interior Fixed Windows

*Includes: Interior fixed or operable windows used singly and in multiples. Includes Interior Window Supplementary Components as appropriate. Includes metal, wood, plastic, and composite window units.*

Associated Masterformat Sections: 08 50 00

### C1020.50 21-03 10 20 50 Interior Special Function Windows

*Includes interior windows with special characteristics for a special function.*

Associated Masterformat Sections: 08 56 00 / 08 56 19 / 08 56 46 / 08 56 49 / 08 88 49 / 08 56 53 / 08 88 53 / 08 88 56 / 08 56 63 / 08 56 73

### C1020.90 21-03 10 20 90 Interior Window Supplementary Components

*Includes: Frames, sills, operating hardware, glazing to be included with interior window elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 08 75 00 / 08 80 00

## C1030 21-03 10 30 Interior Doors

*Includes: Interior door assemblies. Includes metal doors and frames, wood doors and frames, plastic doors, and composite doors. Includes Interior Door Supplementary Components as appropriate.*

Associated Masterformat Sections: 08 10 00 / 01 84 13

100	See <a href="#">C10</a>	
200	Units are modeled as a simple, monolithic component; or represented with simple frame and panel.	

## Uniformat Omniclass

	Nominal unit size is provided.	
--	--------------------------------	--

### C1030.10 21-03 10 30 10 Interior Swinging Doors

*Includes: Interior door assemblies. Includes metal doors and frames, wood doors and frames, plastic doors, and composite doors. Includes Interior Door Supplementary Components as appropriate.*

Associated Masterformat Sections: 08 10 00

100	See <a href="#">C10</a>	
200	See <a href="#">C1030</a>	
300	Door assemblies modeled by type to include the following: <ul style="list-style-type: none"><li>• Specific door panels and frames (if applicable).</li><li>• Operation is specified</li></ul>	
350	Major framing elements are modeled at jambs and head in containing wall.  Operation or mechanism enclosures are modeled, if applicable.	
400	Actual frame/mullion extrusions.  Actual panel size dimensions.  All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

### C1030.20 21-03 10 30 20 Interior Entrance Doors

*Includes: Exterior personnel door assemblies at interior main entrances. Includes automatic, revolving, balanced, and other special operating entrance doors, and sliding storefront wall systems. Includes Interior Door Supplementary Components as appropriate when not part of storefront system.*

Associated Masterformat Sections: 08 42 00 / 08 42 26 / 08 42 29 / 08 42 33 / 08 42 36  
08 43 29

[See [B2050.10](#)]

### C1030.25 21-03 10 30 25 Interior Sliding Doors

Associated Masterformat Sections: 08 11 73 / 08 32 00

[See [C1030.10](#)]

### C1030.30 21-03 10 30 30 Interior Folding Doors

Associated Masterformat Sections: 08 35 13

[See [C1030.10](#)]

### C1030.40 21-03 10 30 40 Interior Coiling Doors

Associated Masterformat Sections: 08 33 00 / 08 33 13

100	See <a href="#">C10</a>	
-----	-------------------------	--

## Uniformat      Omniclass

200	See <a href="#">C1030</a>	
300	Coiling door assemblies modeled by type to include the following: <ul style="list-style-type: none"><li>• Door panels with nominal dimensions.</li><li>• Frames with nominal dimensions.</li><li>• Hardware set functionality and types included in non-graphic information.</li><li>• Clearance zones for operation of overhead doors are modeled or accommodated by model checking software.</li><li>• Enclosures and motor housings are modeled with overall nominal dimensions.</li></ul>	
350	Major framing elements in wall are modeled at jambs and head.  Other major structural support elements are modeled.	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

### C1030.50      21-03 10 30 50      Interior Panel Doors

*Includes: Interior large opening doors constructed of panels that move.*

Associated Masterformat Sections: 08 36 00 / 08 36 13 / 08 36 16 / 08 36 19 / 08 36 23

[See [C1030.40](#)]

### C1030.70      21-03 10 30 70      Interior Special Function Doors

*Includes: Interior door assemblies for a variety of special functions and applications involving a variety of operating methods. Includes Interior Door Supplementary Components as appropriate.*

Associated Masterformat Sections: 08 30 00. / 08 34 13 / 08 34 19 / 08 34 33 / 08 34 36  
08 34 46 / 08 34 49 / 08 88 49 / 08 34 53 / 08 42 33.13 / 08 88 53 / 08 88 56 / 08 34 59  
08 34 63 / 08 34 73 / 08 38 00 / 08 39 00

[See [C1030.40](#)]

### C1030.80      21-03 10 30 80      Interior Access Doors and Panels

*Includes: Doors and panels in walls, ceilings, and floors to provide access to concealed spaces. Includes frames and hardware.*

Associated Masterformat Sections: 08 31 00

[See [C1030.40](#)]

### C1030.90      21-03 10 30 90      Interior Door Supplementary Components

*Includes: Frames, hardware, glazing, and louvers that are part of door to be included with interior door elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 08 10 00 / 08 30 00 / 08 71 00 / 08 80 00 / 08 91 26

## Uniformat      Omniclass

### C1040            21-03 10 40            Interior Grilles and Gates

*Includes: Interior operable grilles and gates Includes frames and hardware.*

100	See <a href="#">C10</a>	
200	See <a href="#">C1030</a>	

### C1040.10        21-03 10 40 10        Interior Grilles

Associated Masterformat Sections: 08 11 74 / 08 33 00 / 08 35 16

100	See <a href="#">C10</a>	
200	See <a href="#">C1030</a>	
300	Grille assemblies modeled by type to include the following: <ul style="list-style-type: none"><li>• Nominal size of unit.</li><li>• Required openness provided as non-graphic information.</li><li>• Operation is specified graphically.</li></ul>	
350	Major framing elements are modeled at jambs and head.	
400	All connections and interfaces modeled including brackets, supports, sealants, and thresholds.	

### C1040.50        21-03 10 40 50        Interior Gates

*Includes: Interior devices of solid or open construction, usually hinged, to provide moveable barrier for access through partition or other divider. Includes hardware, accessories, and finishing.*

Associated Masterformat Sections: 08 34 56 / 10 22 16

[See [C1040.10](#)]

### C1060            21-03 10 60            Raised Floor Construction

Associated Masterformat Sections: 01 84 13 / 01 84 13 / 01 84 13 / 01 84 13 / 01 84 13  
01 84 13 / 01 84 13 / 01 84 13 / 01 84 13

100	See <a href="#">C10</a>	
200	Generic assembly that contains spatial allowance for support system and flooring material.	

### C1060.10        21-03 10 60 10        Access Flooring

*Includes: Free-standing, elevated accessible floor assembly forming an underfloor cavity that may be used for utility or other purposes.*

Associated Masterformat Sections: 09 69 00

## Uniformat      Omniclass

100	See <a href="#">C10</a>	
200	See <a href="#">C1060</a>	
300	Overall flooring assembly modeled by type to specified thickness/depth.  Major openings such as shafts are modeled.	
350	Individual layers of assembly are modeled separately.  All openings and penetrations are modeled.  Expansion joints are modeled indicating specific width.  Pedestals are modeled and located properly, if applicable.	
400	All assembly components are modeled including frame, floor tiles, pedestals, and cross bracing.	

C1060.30      21-03 10 60 30      Platform/Stage Floors

Includes: Fixed construction of raised floor for platforms or stages.  
[See [C1060.10](#)]

## C1070      21-03 10 70      Suspended Ceiling Construction

*Includes: Ceiling Suspension Components.*

Associated Masterformat Sections: 01 84 13 / 01 84 13

100	Ceiling construction is represented in other composite objects such as floors or rooms; or, schematic model elements that are not distinguishable by type or material.  Assembly depth/thickness and locations still flexible.	
200	Generic assemblies indicative of overall scope and approximate thickness/system depth of suspended ceiling.	

## C1070.10      21-03 10 70 10      Acoustical Suspended Ceilings

*Includes: Suspended tiles and panels with specific characteristics for acoustical purposes.*

Associated Masterformat Sections: 09 51 00 / 09 81 00

100	See <a href="#">C1070</a>	
200	See <a href="#">C1070</a>	
300	Overall assembly modeled to specific system thickness including structural backing.  Location of expansion or control joints indicated, but not modeled.	

## Uniformat      Omniclass

	Ceiling grid is shown as linework.	
350	Ceiling suspension grid is modeled.  Structural backing members including bracing/lateral framing/kickers are modeled.  Expansion or control joints are modeled to indicate specific width.	
400	All assembly components are modeled including tees, hangers, support structure, and tiles.	

### C1070.20      21-03 10 70 20      Suspended Plaster and Gypsum Board Ceilings

*Includes: Suspended assemblies with plaster and gypsum board surfaces.*

Associated Masterformat Sections: 09 20 00 / 09 22 26 / 09 81 00

100	See <a href="#">C1070</a>	
200	See <a href="#">C1070</a>	
300	Overall assembly modeled to specific system thickness including framing.  Bulkheads  Major penetrations are modeled.	
350	Major bracing elements such as kickers are modeled.	
400	All assembly components including furring channels, hangers, lath, plaster coats, and gypsum boards.	

### C1070.50      21-03 10 70 50      Specialty Suspended Ceilings

*Includes: Suspended specialty ceiling panels, units, and materials manufactured as finished*

Associated Masterformat Sections: 09 54 00 / 09 56 00

[See [C1070.10](#) or [C1070.20](#)]

### C1070.70      21-03 10 70 70      Special Function Suspended Ceilings

*Includes: Suspended ceiling assemblies with an additional special function including integrated ceiling assemblies.*

Associated Masterformat Sections: 09 57 00 / 09 57 53 / 09 58 00

[See [C1070.10](#) or [C1070.20](#)]

### C1070.90      21-03 10 70 90      Ceiling Suspension Components

*Includes: Hangers and framing to suspend ceiling and sound isolation components to be included with suspended ceiling construction elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 13 48 00

## Uniformat      Omniclass

### C1090            21-03 10 90        Interior Specialties

100	See <a href="#">C10</a>	
200	Generic model elements with approximate nominal size. Placement and quantity remains flexible.	

### C1090.10          21-03 10 90 10        Interior Railings and Handrails

*Includes: Complete interior railing assemblies of various types including glazed railings.*

Associated Masterformat Sections: 01 84 00 / 01 84 00 / 01 84 00 / 01 84 00 / 05 52 00  
05 73 00 / 06 43 16 / 06 63 00 / 06 81 00

100	See <a href="#">C10</a>	
200	Generic model element representing approximate overall height and location of railing/handrail.	
300	Railing/handrail systems modeled by type to include: <ul style="list-style-type: none"><li>• All horizontal rails</li><li>• All vertical posts/balusters</li></ul>	
350	Mounting/attachment components	
400	All assembly components including fasteners and supports.	

### C1090.15          21-03 10 90 15        Interior Louvers

*Includes: Interior louvers, and other items for ventilation which are not an integral part of the mechanical system. Includes operable and stationary louvers.*

Associated Masterformat Sections: 08 91 00 / 01 84 00

100	See <a href="#">C10</a>	
200	Generic model element that is indicative of approximate area and location of louver.	
300	Louver assembly modeled by type, indicative of area and location of intended louver/vent.  Accurate frame and blade boundary areas  Opening for louver is cut from host wall.	
350	Rough opening is modeled in containing wall.  Major framing elements are modeled at jambs and head.  Connection points are modeled.	
400	All connections and interfaces modeled including brackets, supports, and sealants.	

## Uniformat      Omniclass

### C1090.20      21-03 10 90 20      Information Specialties

*Includes: Visual display units, display cases, directories, interior signage, telephone specialties, and informational kiosks.*

Associated Masterformat Sections: 10 10 00 / 10 11 00 / 10 11 13 / 10 11 16 / 10 11 23  
10 11 33 / 10 11 36 / 10 11 39 / 10 11 43 / 10 11 46 / 10 12 00 / 10 13 00 / 10 14 00 10 17 00 / 10 18 00

[See [Fundamental LOD Definitions](#)]

### C1090.25      21-03 10 90 25      Compartments and Cubicles

*Includes: Manufactured compartments and cubicles for specific purposes. Includes toilet compartments, shower stalls, etc.*

Associated Masterformat Sections: 10 21 00 / 10 21 13 / 10 21 16 / 10 21 23 / 10 28 19

[See [Fundamental LOD Definitions](#)]

### C1090.30      21-03 10 90 30      Service Walls

*Includes: Wall assemblies and wall-mounted units incorporating services.*

Associated Masterformat Sections: 10 25 00 / 10 25 13 / 10 25 16

[See [C1010.10](#)]

### C1090.35      21-03 10 90 35      Wall and Door Protection

*Includes: Manufactured protective devices for walls and doors. Includes corner guards, bumper guards, and protective wall covering.*

Associated Masterformat Sections: 10 26 00 / 10 26 13 / 10 26 16 / 10 26 23 / 10 26 33

[See [Fundamental LOD Definitions](#)]

### C1090.40      21-03 10 90 40      Toilet, Bath and Laundry Accessories

*Includes: Manufactured items for use in conjunction with toilets, baths, and laundries.*

Associated Masterformat Sections: 10 28 00 / 10 28 13 / 10 28 16 / 10 28 23

[See [Fundamental LOD Definitions](#)]

### C1090.45      21-03 10 90 45      Interior Gas Lighting

Associated Masterformat Sections: 10 84 16

[See [Fundamental LOD Definitions](#)]

### C1090.50      21-03 10 90 50      Fireplaces and Stoves

*Includes: Masonry fireplaces and manufactured and fabricated fireplaces, stoves, chimneys, dampers, and specialties for use in construction of fireplaces and stove units.*

Associated Masterformat Sections: 10 30 00 / 04 50 00 / 04 57 00 / 10 31 00 / 10 31 13  
10 32 00 / 10 35 00

[See [Fundamental LOD Definitions](#)]

## Uniformat      Omniclass

C1090.60      21-03 10 90 60      Safety Specialties

Includes: Accessories that provide emergency aid.

Associated Masterformat Sections: 10 40 00 / 10 41 00 / 10 43 00

[See [Fundamental LOD Definitions](#)]

C1090.70      21-03 10 90 70      Storage Specialties

Includes: Lockers, postal specialties, storage specialties, and wardrobe and closet specialties.

Associated Masterformat Sections: 10 50 00 / 10 51 00 / 10 51 53 / 10 55 00 / 10 55 23 / 10 55 91 / 10 56 00 / 10 56 29 / 10 56 33 / 10 57 00 / 10 57 13 / 10 57 33

[See [Fundamental LOD Definitions](#)]

C1090.90      21-03 10 90 90      Other Interior Specialties

Includes: Pest control devices, flags and banners, security mirrors and domes, and scales.

Associated Masterformat Sections: 10 80 00 / 10 81 00 / 10 81 16 / 10 81 19 / 10 83 00 / 08 83 00 / 10 86 00 / 10 88 00

[See [Fundamental LOD Definitions](#)]

## C20            21-03 20            Interior Finishes

Associated Masterformat Sections: 01 84 19

100	Non-graphic information attached to model elements providing assumptions that are not distinguishable by type or material Types, layouts and locations are still flexible. See Part II	
-----	---	--

## C2010          21-03 20 10          Wall Finishes

Includes: Wall finishes applied over solid substrates. Includes Wall Finish Supplementary Components as appropriate.

Associated Masterformat Sections: 09 70 00 / 01 84 19 / 01 84 19 / 01 84 19 / 01 84 19 / 01 84

100	See <a href="#">C20</a>	
200	Generic materials other than sheet goods and coatings by type (e.g. tile or paneling), approximate thickness represented by a single assembly.. Layouts, patterns and locations are still flexible	
300	Single model element by type with overall thickness that accounts for finish materials based on specific types <u>Tile type CT-1</u> , other than sheet goods and coatings (e.g. <u>Tile type CT-1</u> ).  Sheet goods and coatings may be specified in Part II related to interior partitions.	

## Uniformat      Omniclass

350	Individual materials are modeled as separate elements  Additional non-graphic information such as manufacturer and model number may be included.  •	
400	Individual material pattern layouts, expansion/control joints, and finish edges to be modeled as separate elements.	

### C2010.10      21-03 20 10 10      Tile Wall Finish

*Includes:* Manufactured surfacing units of impervious, vitreous, semi-vitreous, and non-vitreous materials; glazed, unglazed, conductive, and textured surfaces.

Associated Masterformat Sections: 09 30 00

[See [C2010](#)]

### C2010.20      21-03 20 10 20      Wall Paneling

*Includes:* Covering or cladding of interior walls with paneling. Includes associated furring, fastening, and trim.

Associated Masterformat Sections: 06 42 00 / 06 25 00 / 06 26 00 / 06 64 00 / 06 83 00

[See [C2010](#)]

### C2010.30      21-03 20 10 30      Wall Coverings

*Includes:* Wall coverings applied over solid substrates. Includes vinyl-coated fabric, vinyl and cork wall coverings; wall papers; and flexible wood sheets.

Associated Masterformat Sections: 09 72 00 / 09 74 00

[See [C2010](#)]

### C2010.35      21-03 20 10 35      Wall Carpeting

*Includes:* Wall carpet materials and accessories.

Associated Masterformat Sections: 09 73 00

### C2010.50      21-03 20 10 50      Stone Facing

*Includes:* Natural stone applied as an interior veneer surface.

Associated Masterformat Sections: 09 75 00

[See [C2010](#)]

### C2010.60      21-03 20 10 60      Special Wall Surfacing

*Includes:* Manufactured decorative interior wall surface products including plastic blocks.

Associated Masterformat Sections: 09 77 00 / 09 77 13 / 09 77 23 / 09 76 00

[See [C2010](#)]

## Uniformat      Omniclass

### C2010.70      21-03 20 10 70      Wall Painting and Coating

*Includes: Interior painting and coating with transparent and opaque finishes. Includes stains, varnishes, lacquers, primers, fillers, paint removers, and waxes, and preparation of surfaces.*

Associated Masterformat Sections: 09 90 00

[See [C2010](#)]

### C2010.80      21-03 20 10 80      Acoustical Wall Treatment

*Includes: Sound absorbing, reflecting, and diffusing wall units, and accessories.*

Associated Masterformat Sections: 09 83 13 / 09 84 00 / 09 84 33

[See [C2010](#)]

### C2010.90      21-03 20 10 90      Wall Finish Supplementary Components

*Includes: Furring to be included with wall finish elements above as appropriate.*

Associated Masterformat Sections: 06 10 00 / 09 22 13

[See [C1010](#)]

### C2020      21-03 20 20      Interior Fabrications

*Includes: Interior fabrications of a variety of materials formed to various profiles for a variety of purposes including column covers.*

Associated Masterformat Sections: 03 49 00 / 05 50 00 / 05 58 13 / 05 70 00 / 06 44 00 / 06 60 00 / 06 61 00 / 06 80 00 / 09 27 00

[See [Fundamental LOD Definitions](#)]

### C2030      21-03 20 30      Flooring

*Includes: Flooring Supplementary Components as appropriate.*

Associated Masterformat Sections: 09 60 00 / 01 84 19

100	See <a href="#">C20</a>	
200	Generic materials by type (e.g. tile or coatings), approximate thickness represented by a single assembly. Layouts, patterns and locations are still flexible	
300	Single model element by type with overall thickness that accounts for materials based on specific types (e.g. Tile type CT-1).	
350	Individual materials are modeled as separate elements  Additional non-graphic information such as manufacturer and model number may be included.	
400	Individual material pattern layouts, expansion/control joints, and finish edges to be modeled as separate elements.	

## Uniformat      Omniclass

### C2030.10      21-03 20 30 10      Flooring Treatment

*Includes: Coatings and surfacings for finished floor, applied to provide a specific performance characteristic.*

Associated Masterformat Sections: 09 61 00 / 09 61 13

[See C2030]

### C2030.20      21-03 20 30 20      Tile Flooring

*Includes: Manufactured surfacing units of impervious, vitreous, semi-vitreous, and non-vitreous materials; glazed, unglazed, conductive, abrasive, and textured surfaces. Includes wall base units.*

Associated Masterformat Sections: 09 30 00

[See C2030]

### C2030.30      21-03 20 30 30      Specialty Flooring

*Includes: Heavy duty and other specialty flooring. Includes asphaltic plank, laminate, bamboo, leather, cork, acoustic, synthetic turf, metal, structural glass, chemical-resistant, acid resistant, conductive, and static control flooring.*

Associated Masterformat Sections: 09 62 00 / 09 35 00 / 09 63 13.35 / 09 62 35 / 09 33 00 / 09 65 33 / 09 66 33 / 09 61 36 / 09 65 36

[See C2030]

### C2030.40      21-03 20 30 40      Masonry Flooring

*Includes: Fired clay unit masonry, cat stone, and stone flooring. Includes wall base.*

Associated Masterformat Sections: 09 63 00 / 09 63 13 / 09 63 40 / 09 63 43

[See C2030]

### C2030.45      21-03 20 30 45      Wood Flooring

*Includes: Strip, parquet, block, and composition wood flooring.*

Associated Masterformat Sections: 09 64 00

[See C2030]

### C2030.50      21-03 20 30 50      Resilient Flooring

*Includes: Resilient tile and sheet flooring. Includes integral and applied wall bases.*

Associated Masterformat Sections: 09 65 00

[See C2030]

### C2030.60      21-03 20 30 60      Terrazzo Flooring

*Includes: Cast-in-place, sand-cushion, monolithic, bonded and adhesively-bonded portland cement terrazzo; poured-in-place epoxy, polyester, and resinous matrix terrazzo; and precast terrazzo. Includes integral or precast wall bases, accessories, and finish sealers.*

Associated Masterformat Sections: 09 66 00 / 09 66 13 / 09 66 16 / 09 66 23

[See C2030]

## Uniformat      Omniclass

### C2030.70      21-03 20 30 70      Fluid-Applied Flooring

*Includes: Flooring applied in a viscous state.*

Associated Masterformat Sections: 09 67 00 / 09 67 13 / 09 67 16 / 09 67 19 / 09 67 23 / 09 67 26

[See C2030]

### C2030.75      21-03 20 30 75      Carpeting

*Includes: Floor carpet materials including cushions, accessories, and wall base.*

Associated Masterformat Sections: 09 68 00 / 09 68 13 / 09 68 16

[See C2030]

### C2030.80      21-03 20 30 80      Athletic Flooring

*Includes: Flooring for athletic purposes.*

Associated Masterformat Sections: 09 64 66 / 09 65 66 / 09 67 66

[See C2030]

### C2030.85      21-03 20 30 85      Entrance Flooring

*Includes: Special floor surfaces at entrances.*

Associated Masterformat Sections: 12 48 13 / 12 48 16 / 12 48 19 / 12 48 23 / 12 48 26

[See C2030]

### C2030.90      21-03 20 30 90      Floor Supplementary Components

*Includes: Furring, underlayment, and sound and vibration control to be included with flooring elements above as appropriate.*

Associated Masterformat Sections: 06 10 00 / 06 16 26 / 09 60 13 / 09 62 48

[See C2030]

## C2040      21-03 20 40      Stair Finishes

*Includes: Stair tread, riser, and landing finish of various materials.*

Associated Masterformat Sections: 01 84 19

[See [C2010](#)]

200	Generic representation of the system envelope, including critical path of travel zones.	

## Uniformat      Omniclass

### D1010.10      21-04 10 10 10      Elevators

*Includes: Passenger and freight elevators of all types, including cars, enclosures, controls, safety equipment, hoist way equipment, and elevator machinery. Includes associated metal fabrications including pit ladders.*

Associated Masterformat Sections: 01 85 00 / 14 20 00 / 14 21 13 / 14 21 23 / 14 21 33  
14 21 43 / 14 24 13 / 14 24 23 / 14 24 33 / 14 24 43 / 14 26 00 / 14 27 00 / 14 28 00

100	See <a href="#">D10</a>	
200	See <a href="#">D1010</a>	

## Uniformat      Omniclass

300	<p>Specific system elements modeled by type, including all path of travel zones.</p> <p>Pits and/or control rooms and associated equipment to be modeled if applicable.</p> <p>Major structural support elements modeled.</p> <p>Connections to mechanical or electrical services.</p>	
350	<p>Sizing adjusted to the actual manufacturer specifications.</p> <p>Guiding tracks/rails</p> <p>Service/access zones</p>	

## Uniformat      Omniclass

400	All connections, supports, framing, and other supplementary components.	
-----	---	--

### D1010.20      21-04 10 10 20      Lifts

*Includes: Vertical or inclined lifts and related equipment for a variety of purposes. Sidewalk lifts include doors.*

Associated Masterformat Sections: 01 85 00 / 14 40 00 / 14 41 00 / 14 42 00 / 14 43 00  
14 43 13 / 14 43 16 / 14 44 00 / 14 45 00

[See [D1010.10](#)]

### D1010.30      21-04 10 10 30      Escalators

*Includes: Passenger conveying systems composed of moving treads installed in inclined position including associated components, hardware, controls, safety equipment, and related items.*

Associated Masterformat Sections: 01 85 00 / 14 31 00

100	See <a href="#">D10</a>	
200	See <a href="#">D1010</a>	

## Uniformat      Omniclass

300	Specific system elements modeled by type, including all path of travel zones. Including: <ul style="list-style-type: none"><li>• Truss Shape</li><li>• Risers</li></ul> Balustrade Type	
350	Sizing adjusted to the actual manufacturer specifications. Fixing points of truss Clear Egress Zones Structural Clearance zones	
400	All connections, supports, framing, and other supplementary components.	

### D1010.50      21-04 10 10 50      Dumbwaiters

*Includes: Packaged and field assembled, motorized and hand- operated dumbwaiters including associated components for book lifts, cart lifts, and other applications. Systems include associated components, hardware, controls, and safety equipment.*

Associated Masterformat Sections: 01 85 00 / 14 10 00

[See [D1010.10](#)]

### D1010.60      21-04 10 10 60      Moving Ramps

*Includes: Passenger conveying systems composed of moving belts installed in inclined position including associated components, hardware, controls, safety equipment, and related items.*

Associated Masterformat Sections: 01 85 00 / 14 33 00

[See [D1010.10](#)]

### D1030      21-04 10 30      Horizontal Conveying

Associated Masterformat Sections: 01 85 00

[See [D1010.10](#)]

### D1030.10      21-04 10 30 10      Moving Walks

*Includes: Passenger conveying systems composed of moving belts installed in horizontal position including associated components, hardware, controls, safety equipment, and related items.*

Associated Masterformat Sections: 01 85 00 / 14 32 00

[See [D1010.10](#)]

### D1030.30      21-04 10 30 30      Turntables

*Includes: Structural turntables for various applications.*

Associated Masterformat Sections: 01 85 00 / 14 70 00 / 14 71 00 / 14 71 11 / 14 72 00  
14 72 25 / 14 73 00 / 14 73 59 / 14 74 00 / 14 74 61

## Uniformat      Omniclass

### D2030.20      21-04 20 30 20      Stormwater Drainage Piping

*Includes: Storm drainage piping system within, under, or closely associated with a structure. Includes storm drains for areas closely associated with a structure such as courtyards, plazas, and loading dock areas. May Include: Storm drainage piping from the structure to the utility storm drain.*

Associated Masterformat Sections: 22 05 73 / 22 05 76 / 22 14 13 / 22 14 16 / 22 14 23

100	See <a href="#">D20</a>	
200	Schematic layout with approximate size, shape, and location of mains and risers; shaft requirements modeled;	 <i>132 D2030.20-LOD-200 Stormwater Drainage Piping</i>
300	Modeled as design-specified size, shape, spacing, location, and slope of pipe, valves, fittings, and insulation for risers, mains, and branches; approximate allowances for spacing and clearances required for all specified hangers, supports, vibration and seismic control that are to be utilized in the layout of all risers, mains, and branches; access/code clearance requirements modeled.	 <i>133 D2030.20-LOD-300 Stormwater Drainage Piping</i>
350	Modeled as actual size, shape, spacing, location, connections, and slope of pipe, valves, fittings, and insulation for risers, mains, and branches; actual size and shape, spacing, and clearances required for all hangers, supports, vibration and seismic control that are utilized in the layout of all risers, mains, and branches; Actual access/code clearance requirements modeled. actual floor and wall penetration elements modeled.	 <i>134 D2030.20-LOD-350 Stormwater Drainage Piping</i>

## Uniformat      Omniclass

400	See <a href="#">D2030.10</a>	 <i>135 D2030.20-LOD-400 Stormwater Drainage Piping</i>
-----	------------------------------	--

### D2030.30      21-04 20 30 30      Facility Stormwater Drains

*Includes:* Various types of drains to collect storm water.

Associated Masterformat Sections: 22 14 26

100	See <a href="#">D20</a>	
200	Schematic layout with approximate size, shape, and location of components;	 <i>136 D2030.30-LOD-200 Facility Stormwater Drains</i>

## Uniformat      Omniclass

300	<p>Modeled as design-specified size, shape, spacing, and location of components; approximate allowances for spacing and clearances required for all specified hangers, supports, vibration and seismic control that are to be utilized in the layout of all components; access/code clearance requirements modeled.</p>	 <p>137 D2030.30-LOD-300 Facility Stormwater Drains</p>
350	<p>Modeled as actual construction elements size, shape, spacing, and location/connections of components; actual size, shape, spacing, and clearances required for all hangers, supports, vibration and seismic control that are utilized in the layout of all components. Actual access/code clearance requirements modeled.</p>	 <p>138 D2030.30-LOD-350 Facility Stormwater Drains</p>
400	<p>See <a href="#">D2030.10</a></p>	 <p>139 D2030.30-LOD-400 Facility Stormwater Drains</p>

D2030.60      21-04 20 30 60      Gray Water Systems  
*Includes: Systems to collect, treat, and distribute gray water for other uses such as irrigation.*

Associated Masterformat Sections: 22 13 63

[See [D2030.20](#)]

D2030.90      21-04 20 30 90      Building Support Plumbing System Supplementary Components

*Includes: Common work results for plumbing, plumbing insulation, and instrumentation and control for plumbing to be included with building support plumbing system elements above as appropriate. Includes expansion fittings, meters, gages, valves, hangers, supports, heat tracing, vibration and seismic controls.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

## Uniformat      Omniclass

Associated Masterformat Sections: 05 45 13 / 22 05 00 / 22 05 16 / 22 05 19 / 22 05 23  
22 05 29 / 22 05 33 / 22 05 48 / 22 05 53 / 22 07 00 / 22 09 00

### D2050            21-04 20 50            General Service Compressed-Air

*Includes: Compressed air system serving general service requirements*

Associated Masterformat Sections: 01 86 16 / 22 15 00 / 22 15 13 / 22 15 16 / 22 15 19

[See [D2060.10](#) – Compressed-Air Systems]

### D2060            21-04 20 60            Process Support Plumbing Systems

*Includes: Process Support Plumbing System Supplementary Components as appropriate.*

Associated Masterformat Sections:

100	See <a href="#">D20</a>	
200	Schematic layout with approximate size, shape, and location of mains and risers;  shaft requirements modeled;	

### D2060.10        21-04 20 60 10        Compressed-Air Systems

Associated Masterformat Sections: 01 86 16 / 22 61 00 / 22 61 13 / 22 61 19

100	See <a href="#">D20</a>	
200	See <a href="#">D2060</a>	  <i>140 D2060.10-LOD-200 Compressed-Air Systems</i>
300	Modeled as design-specified size, shape, spacing, location, and slope of equipment/pipes, valves, fittings, and insulation for risers, mains, and branches;  approximate allowances for spacing and clearances required for all specified hangers, supports, vibration and seismic control that are to be utilized in the layout of all risers, mains, and branches;  access/code clearance requirements modeled.	  <i>141 D2060.10-LOD-300 Compressed-Air Systems</i>

## Uniformat      Omniclass

350	Modeled as actual size, shape, spacing, location, connections, and slope of equipment/pipes, valves, fittings, and insulation for risers, mains, and branches; actual size, shape, spacing, and clearances required for all hangers, supports, vibration and seismic control that are utilized in the layout of all risers, mains, and branches; actual access/code clearance requirements modeled. actual floor and wall penetration elements modeled.	 <a href="#">142 D2060.10-LOD-350 Compressed-Air Systems</a>
400	Supplementary components added to the model required for fabrication and field installation.	 <a href="#">143 D2060.10-LOD-400 Compressed-Air Systems</a>

### D2060.20      21-04 20 60 20      Vacuum Systems

*Includes: Vacuum systems for laboratory and healthcare purposes.*

Associated Masterformat Sections: 01 86 16 / 22 62 00 / 22 62 13 / 22 62 19 / 22 62 23

[See [D2060.10](#)]

### D2060.30      21-04 20 60 30      Gas Systems

*Includes: Gas systems for laboratory and healthcare purposes.*

Associated Masterformat Sections: 01 86 16 / 22 63 00 / 22 63 13 / 22 63 19

[See [D2060.10](#)]

### D2060.40      21-04 20 60 40      Chemical-Waste Systems

*Includes: Chemical-waste systems for laboratory and healthcare purposes.*

Associated Masterformat Sections: 01 86 16 / 22 66 00 / 22 66 53 / 22 66 70 / 22 66 83

[See [D2060.10](#)]

### D2060.50      21-04 20 60 50      Processed Water Systems

*Includes: Processed water systems for laboratory and healthcare purposes.*

Associated Masterformat Sections: 01 86 16 / 22 67 00 / 22 67 13 / 22 67 19

[See [D2060.10](#)]

## Uniformat      Omniclass

D2060.90      21-04 20 60 90      Process Support Plumbing System Supplementary Components

*Includes expansion fittings, meters, gages, valves, hangers, supports, heat tracing, vibration and seismic controls. Includes: Common work results for plumbing, plumbing insulation, and instrumentation and controls to be included with process support plumbing systems elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 05 45 13 / 05 45 23 / 22 05 00 / 22 05 23 / 22 05 29 /  
22 05 33 / 22 05 48 / 22 05 53 / 22 07 00 / 22 09 00

D30      21-04 30      Heating, Ventilation, and Air Conditioning (HVAC)

Associated Masterformat Sections: 01 86 19 / 23 00 00

100	Diagrammatic or schematic model elements; conceptual and/or schematic layout/flow diagram;	
-----	---	--

D3010      21-04 30 10      Facility Fuel Systems

*Includes: Fuel-oil, gasoline, natural-gas, and liquefied-petroleum fuel systems associated with a structure.*

Associated Masterformat Sections: 01 86 19 / 23 10 00

100	See <a href="#">D30</a>	
200	Schematic layout with approximate size, shape, and location of element(s); approximate access/code clearance requirements modeled; shaft requirements modeled;	

D3010.10      21-04 30 10 10      Fuel Piping

*Includes: Fuel piping, valves, piping specialties, and other components within, under, or closely associated with a structure.*

Associated Masterformat Sections: 23 11 00

100	See <a href="#">D30</a>	
-----	-------------------------	--

## Uniformat      Omniclass

200	See <a href="#">D3010</a>	 <p>144 D3010.10-200 Fuel Piping</p>
300	<p>Modeled as design-specified size, shape, spacing, and location of pipe, valves, fittings, and insulation for risers, mains, and branches;</p> <p>approximate allowances for spacing and clearances required for all specified hangers, supports, vibration and seismic control that are to be utilized in the layout of all risers, mains, and branches;</p> <p>access/code clearance requirements modeled.</p>	 <p>145 D3010.10-300 Fuel Piping</p>
350	<p>Modeled as actual size, shape, spacing, and location/connections of pipe, valves, fittings, and insulation for risers, mains, and branches;</p> <p>actual size, shape, spacing, and clearances required for all hangers, supports, vibration and seismic control that are utilized in the layout of all risers, mains, and branches;</p> <p>actual access/code clearance requirements modeled.</p> <p>actual floor and wall penetration elements modeled.</p>	 <p>146 D3010.10-350 Fuel Piping</p>
400	Supplementary components added to the model required for fabrication and field installation

		 147 D3010.10-400 Fuel Piping
--	--	--

### D3010.30      21-04 30 10 30      Fuel Pumps

*Includes: Fuel pumps within or closely associated with a structure.*

Associated Masterformat Sections: 23 12 00 / 23 12 13 / 23 12 16

100	See <a href="#">D30</a>	
200	See <a href="#">D3010</a>	
300	Modeled as design-specified size, shape, spacing, and location of equipment;  approximate allowances for spacing and clearances required for all specified anchors, supports, vibration and seismic control that are utilized in the layout of equipment;  access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location/connections of equipment;  actual size, shape, spacing, and clearances required for all specified anchors, supports, vibration and seismic control that are utilized in the layout of equipment.  actual access/code clearance requirements modeled.	
400	See <a href="#">D3010.10</a>	

### D3010.50      21-04 30 10 50      Fuel Storage Tanks

*Includes: Fuel tanks under or closely associated with a structure.*

Associated Masterformat Sections: 23 13 00

100	See <a href="#">D30</a>	
-----	-------------------------	--

## Uniformat      Omniclass

200	See <a href="#">D3010</a>	 <a href="#">148 D3010.50-LOD-200 Fuel Storage Tanks</a>
300	Modeled as design-specified size, shape, spacing, and location of tank(s); approximate allowances for spacing and clearances required for all specified anchors, supports, vibration and seismic control that are utilized in the layout of tanks(s); access/code clearance requirements modeled.	 <a href="#">149 D3010.50-LOD-300 Fuel Storage Tanks</a>
350	Modeled as actual size, shape, spacing, and location/connections of tank(s); actual size, shape, spacing, and clearances required for all specified anchors, supports, vibration and seismic control that are utilized in the layout of tanks(s). actual access/code clearance requirements modeled.	 <a href="#">150 D3010.50-LOD-350 Fuel Storage Tanks</a>
400	See <a href="#">D3010.10</a>	 <a href="#">151 D3010.50-LOD-400 Fuel Storage Tanks</a>

**D3020**

**21-04 30 20**

**Heating Systems**

*Includes: Associated ductwork, piping, valves, and specialties. Includes: Heating System Supplementary Components as appropriate.*

Associated Masterformat Sections: 01 86 19

100	See <a href="#">D30</a>	
200	Schematic layout with approximate size, shape, and location of element(s); shaft requirements modeled;	

### D3020.10      21-04 30 20 10      Heat Generation

*Includes: Boilers, furnaces, solar, geothermal, and biomass heat generation, fuel fired heaters, and heat exchangers. Includes: Fuel-fired boilers and generators for hot water and steam systems. Includes breechings, chimneys, and stacks. Includes: Electric boilers and generators for hot water and steam systems. Includes: Equipment to remove oxygen and other dissolved gases in boiler feed. Includes: Fuel-fired and electric furnaces. Includes: Equipment powered by solar energy. Includes: Fuel-fired radiant and unit heaters. Includes: Equipment used to transfer heat from one medium to another.*

Associated Masterformat Sections: 23 51 00 / 23 52 00 / 23 52 13 / 23 53 00 / 23 53 13 /

D3020.30      21-04 30 20 30

### Thermal Heat Storage

*Includes: Equipment to store thermal energy for use in heating and with charging or discharging this energy at a controllable rate.*

Associated Masterformat Sections: 23 71 13

[See [D3020.10](#)]

D3020.70      21-04 30 20 70

### Decentralized Heating Equipment

*Includes: Heating equipment that serves a portion of a HVAC system. Includes: Convection units may provide heating and cooling.  
Includes: Electric cables or panels and hydronic piping used for radiant heating for space heating.*

Associated Masterformat Sections: 23 80 00 / 23 82 00 / 23 82 13 / 23 82 14 / 23 82 16 /  
23 82 19 / 23 82 23 / 23 82 26 / 23 82 29 / 23 82 33 / 23 82 36 / 23 82 39 / 23 83 00

### D3050.30      21-04 30 50 30      Facility Steam Distribution

*Includes: Piping systems and equipment for distribution of steam and condensate return. Includes piping systems, pumps, tanks, supports and anchors, vibration and seismic controls, identification, and piping and equipment insulation.*

Associated Masterformat Sections: 01 86 19 / 23 22 13 / 23 22 23 / 23 25 19

[See [D3050.10](#)]

### D3050.50      21-04 30 50 50      HVAC Air Distribution

*Includes: Systems for distribution of air including supply systems, return systems, and general exhaust systems. Does not include special exhaust systems such as kitchen hood, paint booth, and fume hood exhaust systems. Includes: Air-handling units consisting of fans, coils, dampers, control devices, and other accessories. Includes: Ducts, duct accessories, fans, terminal units, and air inlets and outlets. Includes: Devices of a variety of types to clean distribution air. Includes: Equipment that adds or removes moisture from a medium in order to control the humidity.*

Associated Masterformat Sections: 01 86 19 / 23 73 00 / 23 74 00 / 23 75 00 / 23 30 00 / 23 34 00 / 23 31 00 / 23 32 00 / 23 33 00 / 23 36 00 / 23 37 00 / 23 40 00 / 23 41 00 / 23 42 00 / 23 43 00 / 23 84 00

200	See <a href="#">D3050</a>	
300	Modeled as design-specified size, shape, spacing, and location of duct, dampers, fittings, and insulation for risers, mains, and branches;  approximate allowances for spacing and clearances required for all specified hangers, supports, vibration and seismic control that are to be utilized in the layout of all risers, mains, and branches;  access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location/connections of duct, dampers, fittings, and insulation for risers, mains, and branches;	

## Uniformat      Omniclass

	actual size, shape, spacing, and clearances required for all hangers, supports, vibration and seismic control that are utilized in the layout of all risers, mains, and branches;  actual floor and wall penetration elements modeled.  actual access/code clearance requirements modeled.	
400	See <a href="#">D3050.10</a>	

D3050.90      21-04 30 50 90

### Facility Distribution Systems Supplementary Components

*Includes expansion fittings, meters, gages, valves, hangers, supports, heat tracing, vibration and seismic controls. Includes: Common work results for HVAC, insulation, and instrumentation and control to be included in distribution system elements above as appropriate.*

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections: 05 45 13 / 23 05 00 / 23 05 16 / 23 05 19 / 23 05 23 /  
23 05 29 / 23 05 33 / 23 05 48 / 23 05 53 / 23 05 63 / 23 05 66 / 23 05 93 / 23 07 00 /  
23 09 00

D3060      21-04 30 60      Ventilation

*Includes: Supply air, return air, exhaust air, outside air, and air cleaning systems. Includes Ventilation Supplementary Components as appropriate.*

Associated Masterformat Sections: 01 86 19

100	See <a href="#">D30</a>	
200	Schematic layout with approximate size, shape, and location of mains and risers;	

D3060.10      21-04 30 60 10

### Supply Air

Associated Masterformat Sections: 23 34 00 / 23 31 00 / 23 32 00 / 23 33 00 / 23 36 00 /  
23 37 00

200	See <a href="#">D5030</a>	
300	Modeled as design-specified size, shape, spacing, and location of outlet boxes and devices; access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of outlet boxes and devices. actual access/code clearance requirements modeled.	
400	Supplementary components added to the model required for fabrication and field installation.	

### D5040      21-04 50 40      Lighting

*Includes: Lighting Supplementary Components as appropriate.*

Associated Masterformat Sections: 26 50 00 / 01 86 26

100	See <a href="#">D50</a>	
200	Schematic layout with approximate size, shape, and location of equipment;	

## Uniformat      Omniclass

### D5040.10      21-04 50 40 10      Lighting Control

*Includes: Clock and calendar, photoelectric switches, occupancy sensors, and light-leveling control devices.*

Associated Masterformat Sections: 26 09 23 / 26 09 26 / 26 09 33 / 26 09 36 / 26 09 43 /  
26 09 61

100	See <a href="#">D50</a>	
200	See <a href="#">D5040</a>	
300	Modeled as design-specified size, shape, spacing, and location of enclosures, equipment, and devices; access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of enclosures, equipment, and control devices; actual size, shape, and location/connections of equipment and control devices. actual access/code clearance requirements modeled.	
400	Supplementary components added to the model required for fabrication and field installation.	

### D5040.20      21-04 50 40 20      Branch Wiring for Lighting

*Includes: Raceways, ducts, cable trays, and wiring beyond branch circuit panelboards to lighting fixtures.*

Associated Masterformat Sections: 26 05 33 / 26 05 43 / 26 05 36 / 26 05 19 / 26 27 26

100	See <a href="#">D50</a>	
200	See <a href="#">D5040</a>	
300	Modeled as design-specified size, shape, spacing, and location of raceways, boxes, and enclosures to fixture locations; approximate allowances for spacing and clearances required for all specified hangers, supports, and seismic control. access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of raceways, boxes, and enclosures to fixture locations; actual size, shape, spacing, and location for supports and seismic control; actual floor and wall penetration elements are modeled. actual access/code clearance requirements modeled.	
400	Supplementary components added to the model required for fabrication and field installation.	

## Uniformat      Omniclass

### D5040.50      21-04 50 40 50      Lighting Fixtures

*Includes: Luminaires, lighting equipment, ballasts, and accessories. Includes fluorescent, high intensity discharge, incandescent, mercury vapor, neon, and sodium vapor lighting.*

Associated Masterformat Sections: 26 50 00 / 26 51 00 / 26 52 00 / 26 53 00 / 26 54 00 /  
26 55 00 / 26 55 23 / 26 55 29 / 26 55 33 / 26 55 36 / 26 55 39 / 26 55 53 / 26 55 59 /  
26 55 61 / 26 55 63 / 26 55 70

100	See <a href="#">D50</a>	
200	See <a href="#">D5040</a>	
300	Modeled as design-specified size, shape, spacing, and location of lighting fixtures;  approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control;  access/code clearance requirements modeled.	  <i>192 D5040.50-LOD-300 Lighting Fixtures</i>
350	Modeled as actual size, shape, spacing, and location of lighting fixtures.  actual size, shape, spacing, and location for supports and seismic control.  actual access/code clearance requirements modeled.	  <i>193 D5040.50-LOD-350 Lighting Fixtures</i>
400	Supplementary components added to the model required for fabrication and field installation.	

### D5040.90      21-04 50 40 90      Lighting Supplementary Components      TBD

### D5080      21-04 50 80      Miscellaneous Electrical Systems

*Includes: Miscellaneous Electrical Systems Supplementary Components as appropriate.*

Associated Masterformat Sections:

100	See <a href="#">D50</a>	
200	Schematic layout with approximate size, shape, and location of equipment;	

### D5080.10      21-04 50 80 10      Lightning Protection

*Includes: Wiring and equipment for lightning protection.*

## Uniformat      Omniclass

Associated Masterformat Sections: 26 41 00 / 01 86 26 / 26 41 13 / 26 41 16 / 26 41 19 /  
26 41 23

100	See <a href="#">D50</a>	
200	See <a href="#">D5080</a>	
300	Modeled as design-specified size, shape, spacing, and location of raceways, boxes, enclosures including the electrical equipment and end-devices served; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of raceways, boxes, enclosures including the electrical equipment, fixtures, and end-devices served actual size, shape, spacing, and location for supports and seismic control; actual size, shape, and location/connections of equipment and support structure/pads; actual floor and wall penetration elements are modeled. actual access/code clearance requirements modeled.	
400	Supplementary components added to the model required for fabrication and field installation.	

D5080.40      21-04 50 80 40      Cathodic Protection      TBD

D5080.70      21-04 50 80 70      Transient Voltage Suppression

*Includes: Devices to protect against voltage surges on electrical distribution systems.*

Associated Masterformat Sections: 26 43 00

100	See <a href="#">D50</a>	
200	See <a href="#">D5080</a>	
300	Modeled as design-specified size, shape, spacing, and location of equipment; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of the equipment; actual size, shape, spacing, and location for supports and seismic control. actual access/code clearance requirements modeled.	

## Uniformat      Omniclass

400	Supplementary components added to the model required for fabrication and field installation.

300	Modeled as design-specified size, shape, spacing, and location of equipment and associated components; approximate allowances for spacing and clearances required for all specified supports and seismic control; access/code clearance requirements modeled.	

## Uniformat      Omniclass

350	Modeled as actual size, shape, spacing, and location of equipment and associated components; actual size, shape, spacing, and location for supports and seismic control; actual size, shape, and location/connections of equipment and support structure/pads. actual access/code clearance requirements modeled.	
400	Supplementary components added to the model required for fabrication and field installation.	

### D6020            21-04 60 20            Voice Communications

*Includes: Communications Supplementary Components as appropriate.*

Associated Masterformat Sections: 27 30 00 / 01 86 29

[See [Fundamental LOD Definitions](#)]

### D6030            21-04 60 30            Audio-Video Communication

*Includes: Communications Supplementary Components as appropriate.*

Associated Masterformat Sections: 27 40 00 / 01 86 29

[See [Fundamental LOD Definitions](#)]

### D6060            21-04 60 60            Distributed Communications and Monitoring

*Includes: Communications Supplementary Components as appropriate.*

Associated Masterformat Sections: 27 50 00 / 01 86 29

[See [Fundamental LOD Definitions](#)]

### D6090            21-04 60 90            Communications Supplementary Components

[See [Fundamental LOD Definitions](#)]

### D70                21-04 70                Electronic Safety and Security

Associated Masterformat Sections: 28 00 00 / 01 86 33

[See [Fundamental LOD Definitions](#)]

### D7010            21-04 70 10            Access Control and Intrusion Detection

*Includes: Electronic Safety and Security Supplementary Components as appropriate.*

## Uniformat      Omniclass

Associated Masterformat Sections: 28 10 00 / 01 86 33

[See [Fundamental LOD Definitions](#)]

### D7030            21-04 70 30            Electronic Surveillance

*Includes: Equipment for detecting and controlling access by persons to a facility site, building, or within a building. Includes Electronic Safety and Security Supplementary Components as appropriate.*

Associated Masterformat Sections: 28 20 00 / 01 86 33

[See [Fundamental LOD Definitions](#)]

### D7050            21-04 70 50            Detection and Alarm

*Includes: Equipment for detecting hazardous conditions in a building or on a facility site and communicating an alarm signal. Includes alarm devices, detection devices, safety switches, and associated items. Includes Electronic Safety and Security Supplementary Components as appropriate.*

Associated Masterformat Sections: 28 30 00 / 01 86 33

### D7070            21-04 70 70            Electronic Monitoring and Control

*Includes: Electronic Safety and Security Supplementary Components as appropriate.*

Associated Masterformat Sections: 28 46 00 / 01 86 33

### D7090            21-04 70 90            Electronic Safety and Security Supplementary Components

**These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.**

Associated Masterformat Sections:

### D80                21-04 80                Integrated Automation

Associated Masterformat Sections: 25 00 00 / 01 86 23

[See [Fundamental LOD Definitions](#)]

### D8010            21-04 80 10            Integrated Automation Facility Controls

*Includes: Hardware and/or software that allows the building automation system to monitor and control other facility equipment and systems. Includes Integrated Automation Supplementary Components as appropriate.*

Associated Masterformat Sections: 25 50 00 / 01 86 23

[See [Fundamental LOD Definitions](#)]

Associated Masterformat Sections: 11 50 00

[See [E1010](#)]

### E1040.10      21-05 10 40 10      Educational and Scientific Equipment

*Includes: Equipment associated with libraries, education facilities, laboratories, planetariums, observatories, and museums.*

Associated Masterformat Sections: 11 50 00 / 11 51 00 / 11 51 13 / 11 51 16 / 11 51 19 / 11 51 23 / 11 52 00 / 11 52 13 / 11 52 16 / 11 52 19 / 11 53 00 / 11 53 13 / 11 53 16 / 11 53 19 / 11 53 23 / 11 53 33 / 11 53 43 / 11 53 53 / 11 55 00 / 11 55 13 / 11 55 16 / 11 56 00 / 11 56 13 / 11 57 00 / 11 59 00 / 11 95 00 / 11 95 13

[See [E1010.10](#)]

### E1040.20      21-05 10 40 20      Healthcare Equipment

*Includes: Specialized equipment for healthcare facilities for humans and animals. Includes film illuminators, fluoroscopes, hubbard tubs, radio isotopic equipment, and surgical equipment.*

Associated Masterformat Sections: 11 70 00 / 05 45 23 / 11 71 00 / 11 72 00 / 11 73 00 / 11 74 00 / 11 75 00 / 11 76 00 / 11 77 00 / 11 78 00 / 11 78 13 / 11 78 16 / 11 78 19 / 11 79 00

[See [E1010.10](#)]

### E1040.40      21-05 10 40 40      Religious Equipment

*Includes: Built-in and free-standing religious equipment, including baptistery and chancel fittings.*

Associated Masterformat Sections: 11 91 00 / 11 91 13

[See [E1010.10](#)]

### E1040.60      21-05 10 40 60      Security Equipment

*Includes: Equipment specifically designed for secure operations.*

Associated Masterformat Sections: 11 18 00 / 11 18 13 / 11 18 16 / 11 18 23

## Uniformat      Omniclass

[See [E1010.10](#)]

### E1040.70      21-05 10 40 70      Detention Equipment

*Includes: Equipment specifically designed for detention facilities.*

Associated Masterformat Sections: 11 19 00 / 01 87 13 / 11 19 13 / 11 19 16

[See [E1010.10](#)]

### E1060      21-05 10 60      Residential Equipment

*Includes: Built-in and free-standing appliances and other components specifically for residential use.*

Associated Masterformat Sections: 11 30 00

[See [E1010](#)]

#### E1060.10      21-05 10 60 10      Residential Appliances

Associated Masterformat Sections: 11 31 00 / 11 31 13 / 11 31 23

[See [E1010.10](#)]

#### E1060.50      21-05 10 60 50      Residential Stairs

Associated Masterformat Sections: 11 33 00

[See [B1080](#)]

#### E1060.70      21-05 10 60 70      Residential Ceiling Fans

Associated Masterformat Sections: 11 34 00

[See [E1010.10](#)]

### E1070      21-05 10 70      Entertainment and Recreational Equipment

*Includes: Equipment for use in athletic, recreational, and therapeutic activities.*

Associated Masterformat Sections:

[See [E1010](#)]

#### E1070.10      21-05 10 70 10      Theater and Stage Equipment

*Includes: Equipment for support of theatrical, instrumental, and voice programs. Includes cycloramas, entertainment ticket dispensers, scenery and flats, and tormentors.*

Associated Masterformat Sections: 11 61 00 / 11 61 13 / 11 61 23 / 11 61 33 / 11 61 43

[See [E1010.10](#)]

#### E1070.20      21-05 10 70 20      Musical Equipment

*Includes: Musical instruments, including prefabricated and field assembled instruments.*

Associated Masterformat Sections: 11 62 00 / 11 62 13 / 11 62 16 / 11 62 19

### G2020.10        21-07 20 20 10        Parking Lot Pavement

*Includes: Prepared and compacted soil and granular layers placed prior to installation of parking lot pavement. Includes: Finished parking lot pavement of granular and asphaltic materials. Includes: Finished parking lot pavement with high bending resistance, usually of concrete. Includes: Blocks or tiles used for parking lot pavement. Unit pavers set in mastic, sand, or mortar.*

Associated Masterformat Sections: 32 10 00 / 32 12 00 / 32 13 00 / 32 14 00 / 32 15 00

100	See <a href="#">G20</a>	
200	See <a href="#">G20</a>	
300	Specific thickness of pavement and substrate modeled. All drainage slopes modeled.	
350	Openings for drains and other services modeled.	

### G2020.20        21-07 20 20 20        Parking Lot Curbs and Gutters

*Includes: Construction at perimeter of parking lot pavement to separate pavement from adjacent surfaces, provide vehicular restraint, and facilitate drainage.*

Associated Masterformat Sections: 32 16 13

100	See <a href="#">G20</a>	
200	See <a href="#">G20</a>	
300	Full extents of curbs and gutters (above and below grade) are modeled.	
350	<p>Element modeling to include:</p> <ul style="list-style-type: none"> <li>• Reinforcing</li> <li>• Pour stops</li> <li>• Expansion joints</li> </ul>	

## Uniformat      Omniclass

**G2020.40      21-07 20 20 40      Parking Lot Appurtenances**

*Includes traffic signals, signage, striping.*

Associated Masterformat Sections: 32 17 00 / 32 17 13 / 32 17 43 / 10 14 53 / 32 17 23

**G2030      21-07 20 30      Pedestrian Plazas and Walkways**

*Includes: Pavement, curbs and gutters, appurtenances, lighting, and pedestrian control equipment for pedestrian plazas and walkways.  
Includes exterior steps and ramps. May Include: Site earthwork.*

Associated Masterformat Sections: 01 89 16

**G2040      21-07 20 40      Airfields**

*Includes: Pavement, curbs and gutters, appurtenances, lighting, and airfield signally and control equipment for airfields. May Include:  
Site earthwork.*

Associated Masterformat Sections: 01 89 16

**G2050      21-07 20 50      Athletic, Recreational, and Playfield Areas**

*Includes: Surfacing, fencing, equipment, grandstands and bleachers, and lighting for athletic, recreational, and playfield areas. May  
Include: Site earthwork.*

Associated Masterformat Sections: 01 89 16

**G2060      21-07 20 60      Site Development**

[See [Fundamental LOD Definitions](#)]

**G2080      21-07 20 80      Landscaping**

[See [Fundamental LOD Definitions](#)]

*Includes: Trees*

Associated Masterformat Sections: 31 20 00 / 01 89 13

**G30      21-07 30      Liquid and Gas Site Utilities**

Associated Masterformat Sections: 01 89 19

100	Narrative that references the grading model	
200	Approximate sizes, vertical control, and apparatus.	

## Uniformat      Omniclass

### G3010            21-07 30 10        Water Utilities

*Includes: Water distribution for domestic consumption, fire fighting, and irrigation for a facility site and for multiple facilities. Includes trenching and backfilling. Includes Liquid and Gas Site Utilities Supplementary Components as appropriate.*

Associated Masterformat Sections: 33 10 00

100	See <a href="#">G30</a>	
200	See G30	

### G3010.10          21-07 30 10 10      Site Domestic Water Distribution

*Includes: Supply wells, piping, equipment, storage tanks, and water ponds and reservoirs.*

Associated Masterformat Sections: 01 89 19 / 33 21 00 / 33 11 00 / 33 12 00 / 33 12 13  
33 12 16 / 33 12 19 / 33 12 23 / 33 12 33 / 33 13 00 / 33 16 00 / 33 47 19.13 / 33 47 13.13  
33 47 16.13

200	See G30	

### G3010.30          21-07 30 10 30      Site Fire Protection Water Distribution

*Includes: Supply wells, piping, equipment, storage tanks, and water ponds and reservoirs.*

Associated Masterformat Sections: 01 89 19 / 33 21 00 / 33 11 19 / 33 12 00 / 33 12 13 / 33 12 16 / 33 12 19 / 33 12 23 / 33 12 33 / 33 16 00 / 33 47 19.33 / 33 47 13.13 / 33 47 16.13

100	See <a href="#">G30</a>	
200	See G30	

### G3020            21-07 30 20        Sanitary Sewerage Utilities

*Includes: Sanitary sewerage for a facility site and for multiple facilities. Includes piping, septic tanks that serve multiple facilities, structures, and lagoons. Includes trenching and backfilling. Includes Liquid and Gas Site Utilities Supplementary Components as appropriate.*

Associated Masterformat Sections: 33 30 00 / 01 89 19

100	See <a href="#">G30</a>	
200	See G30	

### G3020.20          21-07 30 20 20      Sanitary Sewerage Piping

Associated Masterformat Sections: 33 31 00 / 33 33 00 / 33 34 00

100	See <a href="#">G30</a>	
200	See G30	
300	Specific elevations, sizes, materials	

## Uniformat      Omniclass

### G3020.50      21-07 30 20 50      Sanitary Sewerage Structures

Associated Masterformat Sections: 33 39 00 / 33 39 13 / 33 39 23

100	See <a href="#">G30</a>	
200	Approximate structure types, sizes and materials	
300	Specific structure elements at all locations, specific sizes and materials	

### G3030      21-07 30 30      Storm Drainage Utilities

*Includes: Storm drainage for surface or combination of surface and subsurface water for a facility site or for multiple facilities. Includes piping, culverts, water drains, drainage pumps, Subdrainage, and storm drainage ponds and reservoirs. Includes trenching and backfilling. Includes Liquid and Gas Site Utilities Supplementary Components as appropriate.*

Associated Masterformat Sections: 01 89 19

100	See <a href="#">G30</a>	
200	See G30	

### G3050      21-07 30 50      Site Energy Distribution

*Includes: Energy distribution for a facility site or multiple facilities. Includes hydronic heating, steam energy, and hydronic cooling distribution. Includes trenching and backfilling. Includes Liquid and Gas Site Utilities Supplementary Components as appropriate.*

100	See <a href="#">G30</a>	
200	See G30	

### G3060      21-07 30 60      Site Fuel Distribution

*Includes: Gas, fuel-oil, gasoline, diesel fuel, and aviation fuel distribution for a facility site or multiple facilities. Includes trenching and backfilling. Includes Liquid and Gas Site Utilities Supplementary Components as appropriate.*

100	See <a href="#">G30</a>	
200	See G30	

### G3090      21-07 30 90      Liquid and Gas Site Utilities Supplementary Components

*Includes: Common work results for utilities and instrumentation and control to be included in liquid and gas utility elements above as appropriate.*

***These components are typically modeled as part of other assemblies listed in the tables above. Do not assign this Uniformat classification unless a supplementary component is modeled independently of another assembly.***

### G40      21-07 40      Electrical Site Improvements

Associated Masterformat Sections: 01 89 26

## Uniformat      Omniclass

100	Diagrammatic or schematic model elements: conceptual and/or schematic layout; design performance parameters as defined in the BXP to be associated with model elements as non-graphic information.	
-----	--	--

### G4010                  21-07 40 10                  Site Electric Distribution Systems

*Description: Electrical wiring systems to distribute electrical power to on the Site. Includes Duct Banks, Pullboxes, vaults and transformers from the utility point of connection, to the building's main electric room.*

Associated Masterformat Sections: 01 89 26

100	See <a href="#">G40</a>	
200	Generic model elements in schematic layout with: approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BXP to be associated with model elements as non-graphic information.	
300	Modeled as design-specified size, shape, spacing, and location of raceways/ boxes/enclosures/duct banks in the power distribution system  specified size, shape, spacing, and location of equipment and associated components;  approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control  access/code clearance requirements modeled	 <p>207 G4010-LOD-300 Site Electric Distribution Systems</p>
350	Modeled as actual size, shape, spacing, and location of raceways/ boxes/enclosures/duct banks in the power distribution system;  actual size, shape, spacing, and location for supports and seismic control;  actual size, shape, and location/connections of equipment and support structure/pads.  Actual access/code clearance requirements modeled	 <p>208 G4010-LOD-350 Site Electric Distribution Systems</p>

## Uniformat      Omniclass

400	Supplementary components added to the model required for fabrication and field installation.	 <i>209 G4010-LOD-400 Site Electric Distribution Systems</i>
-----	--	--

### G4050            21-07 40 50            Site Lighting

*Description: Luminaires, lighting equipment, ballasts, and accessories. Includes fluorescent, high intensity discharge, incandescent, mercury vapor, neon, and sodium vapor lighting. Includes Pole Mount, Building Mount and on-grade fixtures for exterior lighting.*  
Associated Masterformat Sections: 26 56 29

100	See <a href="#">G40</a>	
200	Generic elements in schematic layout with: approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BXP to be associated with model elements as non-graphic information.	
300	Modeled as design-specified size, shape, spacing, and location of lighting fixtures; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; required pole bases and footing elements; access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of lighting fixtures; actual size, shape, spacing, and location for supports and seismic control; actual size, shape, and location/connections of equipment and support structure/pads. Actual access/code clearance requirements modeled.	
400	Supplementary components added to the model required for fabrication and field installation.	

## Uniformat      Omniclass

### G50            21-07 50            Site Communications

100	Diagrammatic or schematic model elements: conceptual and/or schematic layout; design performance parameters as defined in the BXP to be associated with model elements as non-graphic information.	
-----	--	--

#### G5010 – Site Communications Systems

*Description: Conduit Systems for routing of Communication trunk systems.*

Associated Masterformat Sections: 33 80 00

100	See <a href="#">G50</a>	
200	Generic elements in a schematic layout with: approximate size, shape, and location of equipment; approximate access/code clearance requirements modeled; design performance parameters as defined in the BXP to be associated with model elements as non-graphic information.	
300	Modeled as design-specified size, shape, spacing, and location of raceways, boxes, and enclosures in the power distribution system; size, shape, spacing, and location of equipment and associated components; approximate allowances for spacing and clearances required for all specified hangers, supports and seismic control; access/code clearance requirements modeled.	
350	Modeled as actual size, shape, spacing, and location of raceways, boxes, and enclosures in the power distribution system; size, shape, spacing, and location for supports and seismic control; size, shape, location, and connections of equipment and support structure or pads; floor and wall penetration elements are modeled. Actual access/code clearance requirements modeled.	
400	Supplementary components added to the model required for fabrication and field installation.

## EXECUTIVE SUMMARY

The Level of Development (LOD) Specification is a reference tool intended to improve the quality of communication among users of Building Information Models (BIMs) about the characteristics of elements in models. The LOD Specification expands upon the LOD schema developed by the American Institute of Architects (AIA) for its E202-2009 BIM and Digital Data Exhibit and updated for the AIA's G202-2013 Project BIM Protocol Form by providing definitions and illustrations of BIM elements of different building systems at different stages of their development and use in the design and construction process.

Building Information Modeling presents information about a construction project or structure in the form of three-dimensional graphical representations of elements (e.g., doors, beams, etc.), which can be further associated with information about other characteristics of those elements. It is possible for the graphical representation of an element, taken alone, to suggest that greater accuracy or intention can be attributed to the element than is in fact the case. The AIA's LOD Schema was developed to provide a more systematic way of conveying the extent of reliance that may be placed on an element. Many participants in the design and construction process felt, however, that the AIA's brief narrative definitions left too much room for interpretation.

Discussions within the BIMForum led to the creation by a multi-disciplinary task force of the LOD Specification. The LOD Specification is an organized collection of interpretations of the AIA's LOD definitions describing input and information requirements and providing graphical examples of the different levels of development of a broad variety of building element classes.

Users of the LOD Specification are cautioned that the LOD Specification does not prescribe the necessary levels of development for different steps in the construction process. That determination is left to each project team. It is believed, however, that the availability of more precise definitions will reduce the risks of miscommunication among members of project teams when the expectations for different stages in the design and construction process are established, through easier identification of what each member of the team is expected to deliver and greater predictability of the level of effort that is required to create each member's deliverables.

The LOD Specification is organized by CSI Uniformat 2010, with the subclasses expanded to Level 4 (and in a few cases to Level 5) to provide detail and clarity to the element definitions. The LOD Specification addresses only LOD 100 through LOD 400 of the AIA's LOD Schema, along with a new level – LOD 350 – which was added between LOD 300 and LOD 400 to better address the information levels required for effective trade coordination. The LOD Specification does not address LOD 500 since that LOD relates to field verification and is not an indication of progression to a higher level of geometry or information.

The BIMForum's interpretation of the LOD definitions are as follows:

LOD 100 elements are not geometric presentations. They may be symbols or other generic representations of information that can be derived from other model elements. Any information derived from LOD 100 elements must be considered approximate.

LOD 200 elements are represented graphically but are generic placeholders, e.g., volume, quantity, location, or orientation. Any information derived from LOD 200 elements must be considered approximate.

LOD 300 elements are graphically represented as specific systems, objects, or assemblies from which quantity, shape, size, location, and orientation can be measured directly, without having to refer to non-modeled information such as notes or dimension call-outs.

LOD 350 elements are enhanced beyond LOD 300 by the addition of information regarding interfaces with other building systems. For example, an LOD 350 masonry wall element would include jamb conditions, bond beams, grouted cells, dowel locations, and joints – information that enables the model user to coordinate the wall element with other systems in the structure.

LOD 400 elements are modeled at sufficient detail and accuracy for fabrication of the represented component.

The LOD Specification does not prescribe who the author of a particular component at a given LOD should be, as that will vary from one project to another. However, the document does provide a concise schematic means through the spreadsheet in Part II for a project team to identify model element authors, again in the interest of improving communication among model users. In addition, the LOD Specification task force has been working with software developers to provide a means within the software of tagging individual elements within a model with their current LOD level.

The LOD Specification is intended as a reference standard, but is also intended to evolve as the use of BIM develops. The Specification is updated annually, and previous versions are maintained at [www.bimforum.org/lod](http://www.bimforum.org/lod). Users are invited to provide comments and recommendations for consideration in future editions.

## 1 OVERVIEW

### 1.1 Description

The *Level of Development (LOD) Specification* is a reference that enables practitioners in the AEC Industry to specify and articulate with a high degree of clarity the content and reliability of Building Information Models (BIMs) at various stages in the design and construction process.

The Specification is a detailed interpretation of the LOD schema developed by the American Institute of Architects (AIA) for its *E202-2009 BIM and Digital Data Exhibit* and updated for its *G202-2013 Project BIM Protocol Form*<sup>4</sup>, defining and illustrating<sup>5</sup> characteristics

---

<sup>4</sup> AIA Contract Document G202-2013, *Building Information Modeling Protocol Form* is part of a series of digital practice documents the AIA published in June 2013. This series consists of AIA E203™–2013, *Building Information Modeling and Digital Data Exhibit*, AIA G201™–2013, *Project Digital Data Protocol Form*, and AIA G202™–2013, *Project Building Information Modeling Protocol Form*. For general information on the documents and downloadable samples see [www.aia.org/digitaldocs](http://www.aia.org/digitaldocs). For executable versions of the documents see <http://www.aia.org/contractdocs>.

<sup>5</sup> All images are intended to illustrate building conditions in compliance with common building codes. However, the images do not take into account site specific conditions, regional building codes and other important information that may require a material change for specific projects. These illustrations do not make representation for fitness for a particular project nor for code or design compliance.

of model elements of different building systems at different Levels of Development, organized according to CSI Uniformat 2010<sup>6</sup>. Its intent is to help explain the LOD framework and standardize its use so that it becomes more useful as a communication tool.

The LOD Specification adheres to the intent of the LOD schema as developed by the AIA, and as such it is important to emphasize several points here.

## A1010      21-01 10 10      Standard Foundations

### 1.1.1    LODs and Design Phase

The LODs are not defined by design phases. Rather, design phase completion, as well as any other milestone or deliverable, can be defined through the LOD language. There are several important reasons for this approach:

- 3) There is currently no detailed standard for the design phases. Many architects have created in-house standards, but these differ from one firm to the next, and even within a single firm the requirements are sometimes adjusted to the needs of a project.
- 4) Building systems progress from concept to precise definition at different rates, so at any given time different elements will be at different points along this progression. At completion of the Schematic Design phase, for example, the model will include many elements at LOD 200, but will also include many at LOD 100, as well as some at LOD 300, and possibly even LOD 400.

### 1.1.2    LODs and Model Definition

There is no such thing as an “LOD ### model.” As previously noted, project models at any stage of delivery will invariably contain elements and assemblies at various levels of development. As an example, it is not logical to require an “LOD 200 model” at the completion of the schematic design phase. Instead, the “100% SD Model” will contain modeled elements at various levels of development.

## 1.2 Intent

### 1.2.1    Not a set of Requirements

The Specification is not a set of requirements as to what is modeled when or by whom. Rather it is a language by which users can define these requirements for their own firms or projects. This clear articulation allows model authors to define what their models can be relied on for, and allows downstream users to clearly understand the usability and the limitations of models they are receiving.

To accomplish the Specification’s intent, its primary objectives are:

- 4) To help teams, including owners, to specify BIM deliverables and to get a clear picture of what will be included in a BIM deliverable
- 5) To help design managers explain to their teams the information and detail that needs to be provided at various points in the design process, and to track progress of their models
- 6) To allow downstream users to rely on specific information in models they receive from others.
- 7) To provide a standard that can be referenced by contracts and BIM execution plans.

(800) 689-2900.

### 1.2.2 Complements a BIM Execution Plan (BIMXP)

This Specification does not replace a project BIMXP, but rather is intended to be used in conjunction with such a plan, providing a means of defining models for specific information exchanges, milestones in a design work plan, and deliverables for specific functions.

## 1.3 Background

### 1.3.1 AIA Effort

In 2008, the AIA published its first set of Level of Development definitions in AIA Document *E202™-2008 Building Information Modeling Protocol*. Due to the rapidly evolving nature of the use of BIM, the AIA evaluated the *E202-2008*, including the LOD definitions. The result is the updated and reconfigured Digital Practice documents, *AIA E203™-2013, Building Information Modeling and Digital Data Exhibit*, *AIA G201™-2013, Project Digital Data Protocol Form*, and *AIA G202™-2013, Project Building Information Modeling Protocol Form*, which are accompanied by a detailed guide document entitled *Guide and Instructions to the AIA Digital Practice Documents*. The AIA's updated Digital Practice documents include revised LOD definitions.

### 1.3.2 BIMForum Effort

In 2011 the BIMForum initiated the development of this LOD Specification and formed a working group comprising contributors from both the design and construction sides of the major disciplines. To help further the standardization and consistent use of the LOD schema, and to increase its usefulness as a foundation for collaboration, the AIA licensed the BIMForum to utilize its latest LOD definitions in this Specification. The BIMForum working group first interpreted the AIA's basic LOD definitions for each building system, and then compiled examples to illustrate the interpretations. Because BIM is being put to an ever-increasing number of uses, the group decided that it was beyond the initial scope to address all of them. Instead, the definitions were developed to address model element geometry, with three of the most common uses in mind – quantity take-off, 3D coordination and 3D control and planning. The group felt that in taking this approach the interpretations would be complete enough to support other uses.

### 1.3.3 LOD Definitions

The LOD definitions that are used in this Specification are identical to those published in the AIA's updated Digital Practice Documents, with two exceptions.

- 1) First, the working group identified the need for an LOD that would define model elements sufficiently developed to enable detailed coordination between disciplines – e.g. clash detection/avoidance, layout, etc. The requirements for this level are higher than those for 300, but not as high as those for 400, thus it was designated LOD 350. The AIA documents do not include LOD 350, but the associated *Guide and Instructions* references it.
- 2) Second, while LOD 500 is included in the AIA's LOD definitions, the working group did not feel it was necessary to further define and illustrate LOD 500 in this Specification because it relates to field verification. Accordingly, the expanded descriptions and graphic illustrations in this Specification are limited to LOD 100-400.

## 2 LEVELS OF DEVELOPMENT

### 2.1 BIM as a Communication Tool

The LOD schema addresses several issues that arise when a BIM is used as a communication or collaboration tool, i.e., when someone other than the author extracts information from it:

- 1) During the design process, building systems and components progress from a vague conceptual idea to a precise description. In the past, there has been no simple way to designate where a model element is along this path. The author knows, but others often don't.
- 2) It's easy to misinterpret the precision at which an element is modeled. Hand drawings range from pen strokes on a napkin to hard lines with dimensions called out, and the precision of the drawing can be inferred from its appearance. In a model though, a generic component placed approximately can look exactly the same as a specific component located precisely, so we need something besides appearance to tell the difference.
- 3) It is possible to infer or extract information from a BIM that the author doesn't intend – unconfirmed dimensions can be measured with precision, assembly information often exists before it's been finalized, etc. In the past, this issue has been sidestepped with all-encompassing disclaimers that basically say, "Since some of the information in the model is unreliable,

you may not rely on any of it.” The LOD framework allows model authors to clearly state the reliability of given model elements, so the concept becomes “Since some of the information in the model is unreliable, you may only rely on it for what I specifically say you can.”

- 4) In a collaborative environment, where people other than the model author are depending on information from the model in order to move their own work forward, the design work plan takes on high importance – it is necessary for the model users to know when information will be available in order to plan their work. The LOD framework facilitates this.

The LOD Framework addresses these issues by providing an industry-developed standard to describe the state of development of various systems, assemblies, and components within a BIM. This standard enables consistency in communication and execution by facilitating the detailed definition of BIM milestones and deliverables.

## 2.2 Level of Development vs. Level of Detail

LOD is sometimes interpreted as Level of *Detail* rather than Level of *Development*. This Specification uses the concept of Level of *Development*. There are important differences.

Level of *Detail* is essentially how *much detail* is included in the model element. Level of *Development* is the *degree to which the element's geometry and attached information has been thought through* – the degree to which project team members may rely on the information when using the model.

In essence, Level of Detail can be thought of as input to the element, while Level of Development is reliable output.

## 2.3 Fundamental LOD Definitions <sup>7</sup>

### 2.3.1 LOD 100

*The Model Element may be graphically represented in the Model with a symbol or other generic representation, but does not satisfy the requirements for LOD 200. Information related to the Model Element (i.e. cost per square foot, tonnage of HVAC, etc.) can be derived from other Model Elements.*

BIMForum Interpretation: LOD 100 elements are not geometric representations. Examples are information attached to other model elements or symbols showing the existence of a component but not its shape, size, or precise location. Any information derived from LOD 100 elements must be considered approximate.

### 2.3.2 LOD 200

*The Model Element is graphically represented within the Model as a generic system, object, or assembly with approximate quantities, size, shape, location, and orientation. Non-graphic information may also be attached to the Model Element.*

BIMForum interpretation: At this LOD elements are generic placeholders. They may be recognizable as the components they represent, or they may be volumes for space reservation. Any information derived from LOD 200 elements must be considered approximate.

### 2.3.3 LOD 300

*The Model Element is graphically represented within the Model as a specific system, object or assembly in terms of quantity, size, shape, location, and orientation. Non-graphic information may also be attached to the Model Element.*

BIMForum interpretation: The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs. The project origin is defined and the element is located accurately with respect to the project origin.

---

<sup>7</sup> The definitions for LOD 100, 200, 300, 400, and 500 included in this Specification represent the updated language that appears in the AIA's most recent BIM protocol document, G202-2013, *Building Information Modeling Protocol Form*. The LOD 100, 200, 300, 400 and 500 definitions are produced by the AIA and have been used by permission. Copyright © 2013. The American Institute of Architects. All rights reserved. LOD 350 was developed by the LOD working group. Copyright © 2013. The Associated General Contractors of America and the American Institute of Architects. All rights reserved.

#### 2.3.4 LOD 350

*The Model Element is graphically represented within the Model as a specific system, object, or assembly in terms of quantity, size, shape, location, orientation, and interfaces with other building systems. Non-graphic information may also be attached to the Model Element.*

BIMForum interpretation. Parts necessary for coordination of the element with nearby or attached elements are modeled. These parts will include such items as supports and connections. The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

#### 2.3.5 LOD 400

*The Model Element is graphically represented within the Model as a specific system, object or assembly in terms of size, shape, location, quantity, and orientation with detailing, fabrication, assembly, and installation information. Non-graphic information may also be attached to the Model Element.*

BIMForum interpretation. An LOD 400 element is modeled at sufficient detail and accuracy for fabrication of the represented component. The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

#### 2.3.6 LOD 500 [NOT USED]

*The Model Element is a field verified representation in terms of size, shape, location, quantity, and orientation. Non-graphic information may also be attached to the Model Elements.*

BIMForum interpretation. Since LOD 500 relates to field verification and is not an indication of progression to a higher level of model element geometry or non-graphic information, this Specification does not define or illustrate it.

### 2.4 Example – Light Fixture:

- 100 cost/sf attached to floor slabs
- 200 light fixture, generic/approximate size/shape/location
- 300 Design specified 2x4 troffer, specific size/shape/location
- 350 Actual model, Lightolier DPA2G12LS232, specific size/shape/location
- 400 As 350, plus special mounting details, as in a decorative soffit

## 3 USING THE SPECIFICATION

### 3.1 Glossary

The expanded definitions in this Specification use the following interpretations of these terms:

#### 3.1.1 Actual:

The model element includes all the qualities of a specific element and is representative of the manufacturer's model to be installed or the construction intent of an assembly.

#### 3.1.2 BXP

BIM Execution Plan

#### 1.1.1 Specific:

The quantity, size, shape, location, and orientation of the element as designed can be measured directly from the model without referring to non-modeled information such as notes or dimension call-outs.

### 3.2 Details

#### 3.2.1 Order of Precedence

The body of this Specification expands on the Fundamental Definitions as they apply to specific building systems and sub-systems. In the event of any conflict, more specific expansions take precedence over less specific expansions and Fundamental Definitions, e.g. the expanded definitions for C1010 take precedence over those for C10, which in turn take precedence over the Fundamental Definitions.

#### 3.2.2 LOD Definitions as Minimum Requirements

The LODs provide five snapshots of the progression of an element from conceptual to specified – there are many steps in this progression between the defined LODs. The LOD definitions, then, should be considered minimum requirements – i.e. an element has progressed to a given LOD only when all the requirements stated in the definition have been met.

#### 3.2.3 LOD Definitions are Cumulative

For a given element each LOD definition includes the requirements of all previous LODs. Thus, for an element to qualify for LOD 300 it must meet all the requirements for 200 and 100 as well as those stated in the LOD 300 definition.

#### 3.2.4 Model Element Author

This document does not prescribe who the author of a particular component at a given LOD should be – the sequence of responsibility for modeling various systems will vary from one project to another. To accommodate this variation this document defers to the concept of Model Element Author (MEA) as defined in the AIA E203-2013: "The Model Element Author is the entity (or individual) responsible for managing and coordinating the development of a specific Model Element to the LOD required for an identified Project milestone, regardless of who is responsible for providing the content in the Model Element." <sup>8</sup>

---

### 3.2.5 2D Supplementary Drawings

In current practice models are often supplemented with 2D information such as detail drawings. This Specification does not address this supplementation, but rather deals only with what is modeled in 3D and non-graphic information associated with the modeled elements.

## 3.3 Project-Specific Information

As mentioned in the Overview above, this Specification is intended to be used in conjunction with a project BIMXP. Many information needs will vary from project to project, even for identical elements. This kind of information is therefore not included in the LOD definitions specified here, but rather is left to be addressed in individual BIMXPs. The following are some notable examples.

### 3.3.1 Size Thresholds

In most projects, a determination is made to model certain elements only if they are over a specified size – e.g. conduit less than 1/2" (10 mm) diameter is not modeled. These size thresholds do not consistently correspond to certain LODs, and they vary from project to project. Thus, they are not specified in the LOD definitions but rather in the project's BIMXP, for example through the "Notes" cells in the Model Element Table of the AIA G202-2013.

## 3.4 Using the Specification with a BIMXP

Most BIMXPs include a section that details milestones as well as information exchanges – models to be produced to exchange specific information at specific points in a specific BIM use. In most cases, though, current practice is to accompany these models with the common "for reference only" disclaimer, diluting the effectiveness of the exchange. Referencing this Specification in the BIMXP and using it to concisely define the milestone and information exchange models brings many efficiencies to the process – among them:

### 3.4.1 Reliance

As noted above (see "BIM as a Communication Tool"), a major problem with allowing others to rely on a BIM is that it can contain information the author doesn't intend. By defining a model through the LOD Specification the author can limit reliance to only what he/she specifically states.

### 3.4.2 Multiple uses

Much model information is common across several information exchanges. This Specification facilitates the definition of models that will support multiple exchanges.

### 3.4.3 Efficient sequencing

The development of models as the design and construction process progresses follows logical sequences – much information depending on the prior development of other information. The definition of milestones, information exchanges, and other deliverables through this Specification facilitates the orderly sequencing of models to align with efficient development of information.

### 3.4.4 Avoidance of over-modeling

The LOD Specification facilitates the application of a pull-planning process to the modeling effort, limiting the development of model elements and information to that which the team identifies as useful.

Note that the definition and sequencing of models usually cannot be set in stone when the BIMXP is first developed. In most cases the modeling plan must evolve as the project progresses.

## 3.5 Implementation of the Specification

Currently, two methods of implementation have been developed.

### 3.5.1 Rely on the Model Element Table

Project team refers to the model element table included in an AIA G202 document or a BIM execution plan for the LODs of model elements. In this method, all elements referred to in a given model element table line item are assumed to be at the LOD stated there. E.g. if the table lists interior doors as LOD 200 for a given model, all interior doors within the model are assumed to be at LOD 200.

### 3.5.2 Include LOD Designations as Attributes of Individual Model Elements

All elements within the model are provided with two attributes – Current LOD (the actual LOD of the element) and Target LOD (the LOD specified for that element in the model element table). Elements default to a Current LOD of 100 or 200 as appropriate, and this attribute is elevated as the element is more fully developed. This method offers more flexibility and reliability, allowing differentiation between individual elements within a single model element table line item. Several software offerings provide the functionality of highlighting elements of various LODs or elements whose Current LOD is less than the Target LOD.

## 4 ORGANIZATION OF THE SPECIFICATION

### 4.1 Geometric and Attribute Information

To facilitate use of this Specification Attachment 1, Model Development Specification (MDS) has been provided. This attachment is a set of spreadsheets that can be used to collect and correlate LOD Information for a specific project.

A model element can contain two types of information: a) the element's geometry and b) associated numeric and/or textual attributes. To address these types of information this Specification contains two parts:

#### 4.1.1 Part I: Element Geometry

Part I consists of narrative descriptions and illustrations of specific model elements at each LOD. Part I forms the bulk of this document.

#### 4.1.2 Part II: Associated Attribute Information

Part II is contained in Attachment 1, a workbook that begins with the Model Element Table which mirrors the layout of the Model Element Table in the AIA G202-2013 *Building Information Modeling Protocol Form*, and can be referenced by that document. The Model Element Table references Attribute Tables that contain attribute information for various building systems.

#### 4.1.3 Model Element Table

The figure shows a screenshot of the Model Element Table. The table has several columns: 
 - \*\*Building Systems\*\*: Columns for UniFormat Level (1, 2, 3, 4), Object Type, and Substructure categories like Foundations, Standard Foundations, Wall Foundations, Column Foundations, Special Foundations, Grade Beams, and Subgrade Enclosures.
 - \*\*Attribute Tables\*\*: Columns for Relevant Attribute Tables and their descriptions (e.g., A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete).
 - \*\*Standard Milestone\*\*: Columns for SD (Date, LOD, MEA, Notes), DD (Date, LOD, MEA, Notes), and CD (Date, LOD, MEA, Notes).
 - \*\*Project-Specific Milestone\*\*: Columns for Estimating (Est. 1 Date, LOD, MEA, Notes), Bid Pkg. Date, LEED Cert. Check Date, and LEED Cert. Submittal Date.
 - \*\*Legend\*\*: A legend at the bottom indicates colors for Building Systems (orange for A, green for B), Attribute Tables (light blue), and Milestones (light green for Standard, light purple for Project-Specific).

Figure 210

#### 4.1.4 Building Systems

The rows of the Model Element Table (Figure 1) are building elements listed in accordance with CSI Uniformat 2010. The table also lists Relevant Attribute Tables for each system, referring to the tabs containing attribute information for the associated system(s). If desired, users can add Attribute Tables for specific line items.

#### 4.1.5 Milestones/Deliverables

The table includes columns for defining the LODs for various milestones within a project. Each milestone column has three sub-columns: Level of Development (LOD), Model Element Author (MEA), and Notes. The table in Attachment 1 shows standard milestones for the completion of the traditional design phases as well as examples of Project-Specific Milestones for interim reviews, specific deliverables, BIM-Use information exchanges, etc. Users are encouraged to modify and add to these milestones as necessary. Once the milestones for a project have been determined, they can be re-ordered into a logical sequence as in Figure 2.

UniFormat Level				Use on this project	SD			Estimating			DD			LEED Cert.			CD			Estimating			LEED Cert.			
1	2	3	4		LOD	MEA	Notes	LOD	MEA	Notes	LOD	MEA	Notes	LOD	MEA	Notes	LOD	MEA	Notes	LOD	MEA	Notes	LOD	MEA	Notes	
A	10			SUBSTRUCTURE																						
A	10			Foundations	A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete																					
A	10	10		Standard Foundations	A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete																					
A	10	10	.10	Wall Foundations	A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete																					
A	10	20	.30	Column Foundations	A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete																					
A	10	20	.80	Special Foundations	A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete																					
A	20			Grade Beams	A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete																					
A	20			Subgrade Enclosures	A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete																					
A	20			Walls for Subgrade Enclosures	A, B Concrete; A, B Wood; A, B Masonry; A, B Precast Concrete																					
A	40			Slabs-on-Grade	A, B - Str. Concrete																					
A	40	10		Standard Slabs-on-Grade	A, B Concrete																					
A	40	20		Structural Slabs-on-Grade	A, B Concrete																					
B	10			SHELL																						
B	10			Superstructure																						
B	10	10		Floor Construction	A, B Cold Formed Metal Framing; A, B Masonry; A, B Metal Deck; A, B Precast Concrete; A, B Steel Joist; A, B Structural Steel; A, B Concrete; A, B Wood																					
B	10	10	.10	Floor Structural Frame																						
B	10	10	.10	Concrete	A, B Concrete																					
B	10	10	.10	Masonry	A, B Masonry

Figure 212

#### 4.1.7 Attribute Table Anatomy

Attribute Tables consist of three parts.

- 1) Part 1, Attribute Description, lists Attributes relevant to the associated building system(s).
  - Attributes are grouped into two categories as shown – Baseline and Additional.
    - The Baseline is the suggested list of attributes to be populated when no other requirements are known (BIM Uses, specific deliverables, etc.).
    - The Additional category may be thought of as a “shopping list” – a list of possible attributes the team may want to consider.
  - Data Types. For simplicity, the published Attribute Tables use only the following data types, but users setting up data for use in specific software may want to add others.

Text	An alphanumeric string not intended for use in calculations. E.g. room numbers are often considered text (even where they only contain numbers) since the numbers are not useful for calculations.
Number	A numerical value that can be entered directly into a program that will use it as input to calculations. Note that no distinction is made here between integers and real numbers.
Logical	Boolean in computer science terminology. A binary yes/no indication. Values for this type can be T or F, 1 or 0.
Date	ISO format is used in these tables: yyyy-mm-dd
Time	ISO format is used in these tables: hh:mm:ss
Datetime	ISO format is used in these tables: yyyy-mm-ddThh:mm:ss

- 2) Part 2, Milestones, is used to mark the attributes required for specific milestones and deliverables. The tables in Attachment 1 include example milestones, but users will customize the tables by copying the milestones they created for the Model Element Table.

#### 4.1.8 MEPF Attribute Tables

The screenshot shows a spreadsheet-like table for 'D20 - Plumbing'. The columns are labeled 'Baseline' and 'Additional'. The rows are categorized under 'Attribute' and 'Global Attributes' (which is bolded). Under 'Global Attributes', there are several rows of placeholder text 'XXXXXXXXXX'. Under 'Fixture-Specific Attributes', there are sections for 'Floor Trap', 'Flow Meter', 'Gas Meter', 'Oil Meter', 'Valve', and 'Garbage Disposal', each with its own set of rows.

The MEPF attribute tables use a somewhat different format than other sections, since components from multiple systems might be used to make up a specific element. Case in point, an air handler is primarily a D30 HVAC element, but can include plumbing, fire protection and electrical elements as well.

The MEP Systems tabs are grouped into two types:

- System component elements: D20 Plumbing, D30 HVAC, D40 Fire Protection and D50 Electrical.
- System distribution elements such as ducts, pipes, and cables: D Air Distribution, D Fluid Gas Distribution and D Electrical Distribution.

MEPF attribute tables are broken down into two main sections

- Global: Attributes that are common to all elements within the table
- Item-Specific: The suggested set of additional attributes that are specific to an individual type of element. In many tables, the individual elements are organized into a hierarchy of classes and sub-classes. In these cases, the attributes applicable to a specific element include those listed for the element itself plus those listed in any of the classes above it in the hierarchy. E.g. as Figure 4 shows, the attributes for an oil meter include all those shown in bold.

*Note: System Component elements use both the Global and Item-Specific attributes sections, while System Distribution elements use only the Item-Specific attribute section.*

Figure 213

#### 4.1.9 Using the Attribute Tables

There are many ways to use the Attribute Tables – three are shown here.

- 1) Project teams adopt the Baseline attribute lists. The pre-populated correlation between Attributes and LODs represents current practices of proficient BIM users in the AEC industry.
- 2) Project teams create a custom correlation between LODs and Attribute population requirements. In this case the project team would edit the LOD Profile section to reflect the specific requirements of the project.
- 3) Project teams create new, project specific milestones and define Attribute population requirements in the Milestones sections. This approach will give project teams the greatest flexibility for defining Attribute population requirements.

Note that the element attribute author can be entered in the LOD profile instead of an “x” to indicate who is responsible for providing the information.

## 5 SUPPLEMENTARY GUIDELINES

### 5.1 Clearly Define the Local X,Y,Z Origin: Basis for all LOD

This is the simplest rule to implement and sadly the most common and costly single item that goes unaddressed in ignorance on projects. The project general notes of the design drawings and specification should clearly define the local relative Building X, Y, Z coordinates that other trades will use in construction that are coordinated with the structural model. It is recommended to define the X,Y coordinates of the origin (Revit Project Internal 0,0) relative to the Southwest most column grid intersection with a South and West offset of 10, 100 or 1000 feet depending on the project size. The Southwest column intersection is chosen so the structure is in a positive X-Y coordinate system. The offsets of 10, 100 or 1000 feet South and West of the origin are so that any portions of the building that extend South or West of the project origin grid intersections will also be within a positive X-Y coordinate system. The Z elevation should be defined as 0, 100' or absolute elevation depending on firm preference. It is common to use a relative 100' elevation. Plan North is established as being in the positive Y direction.

These rules above form the basis of the project's "local" relative Building coordinate system that becomes part of the legal definition in contracts related to the model and references to LOD. This process aids linking the structural model to third party applications that are based on traditional CAD coordinate systems. A benefit of defining the local relative origin early and stating it in the project's general notes is other models that are developed for shop drawings from the construction documents have a point of reference to follow when they are submitted for review. This local relative building coordinate system is also tied back to the civil engineers' state plane coordinate system referred to as the Civil coordinates in Civil 3D. Larger products will also have a Campus coordinate system normally near the Southwest corner of the project site. There can also be an Object coordinate system used for items such as equipment models. This Object coordinate system is typically referenced relative to the Local Building coordinate system in the form of a grid line offset and floor elevation offset. The Civil coordinate system defined by the state plane absolute coordinate system will then have a set relationship with the structural local Building coordinate system of an X, Y, and Z offset and a Z-axis rotation. Using this set relationship between the Civil absolute and relative Building coordinate system, all federated project models can be easily converted to absolute or relative systems depending on the owner's preference in their facility management models. Ideally, the owner will have a clearly written documentation in the BIM Execution Plan that accurately defines the relationship between Object, Building, Campus and Civil coordinate systems.

In summary, these 4 coordinate systems are:

**Object:** relative system that defines items such as assemblies and equipment in the structure. For example, the Air Handler Unit will have a relative Object coordinate that reference the Local Building coordinate which defines the mechanical room it resides in.

**Building, Local:** relative building coordinate system normally defined so that the entire structure is in positive point coordinates. For structure, this should be defined in the construction documents.

**Campus, Site:** relative coordinate system of the building's site defined so that the entire site is in positive point coordinates.

**Civil (State Plane):** Absolute coordinate system with Northing and Easting used by surveyors and civil engineers. This is also used by owners tying in their BIM to GIS applications for example.

#### **Steps and Jobs to be done:**

Structural engineer needs to be able to set the LOD of the origin of the project with the Architect at the start of the DD phase of the project. This needs to be coordinated with the civil engineer and site surveyors state plane coordinates. Following this, any manufacturer will reference the building coordinates for the placing of their content.
